(*Hymenoptera, Formicidae, Myrmicinae*) Michael G. Branstetter,2013-04-24 Stenamma is a cryptic leaf litter ant genus that occurs in mesic forest habitats throughout the Holarctic region Central America and part of northwestern South America Colombia and Ecuador The genus was thought to be restricted primarily to the temperate zone but recent collecting efforts have uncovered a large radiation of Neotropical forms which rival the Holarctic species in terms of morphological and behavioral diversity By inferring a broad scale molecular phylogeny of Stenamma Branstetter 2012 showed that all Neotropical species belong to a diverse Middle American clade MAC and that this clade is sister to an almost completely geographically separated Holarctic clade HOC Here the Middle American clade of Stenamma is revised to recognize 40 species of which 33 are described as new Included in the revision are a key to species based on the worker caste and for each species where possible descriptions and images of workers and queens images of males information on geographic distribution descriptions of intraspecific variation and notes on natural history Several species groups are defined but the majority of species remain unassigned due to a lack of diagnostic morphological character states for most molecular clades
