

EOCT Biology Review Packet 2010-2011

Enjoy your break, but do not forget you will be taking the Biology End of Course Test (EOCT) 3 weeks after you get back to school. The EOCT is worth 15% of your final grade for the course, and is a requirement for graduation. To ensure that you are ready to achieve at least 80% mastery on the core concepts, I am expecting you to complete this review packet over Spring Break.

This packet is due back when you return to school on Monday, April 11th. This review packet will be considered 40% E.O.C. Full GRADE. It is worth a total of 100 points.

To receive full credit, you must complete the entire packet, including the justification boxes.

All the information necessary to answer the questions can be found in your Biology text and/or guided notes. You can also email me at thurgood@fultonschools.org if you have any questions. There are no excuses for not finishing the review packet.

Have a wonderful break,
Mr. Thurgood

9th Grade Eoct Study Guide:

Essays on the Determinants of Student Choices and Educational Outcomes Justin A. Wong, 2011 This dissertation is composed of three essays. Essay 1 Does School Start Too Early For Student Learning considers the connection between school start time and student performance. Biological evidence indicates that adolescents' internal clocks are designed to make them fall asleep and wake up at later times than adults. This science has prompted widespread debate about delaying school start times in the U.S., a country which has some of the earliest start times worldwide. The debate suffers however from a glaring absence of evidence: the small number of prior studies has been too low powered statistically to test whether later start times improve achievement. I fill the gap by studying achievement across a large nationally representative set of high schools that have varying start times. I identify the positive effect of later clock start times as well as the independent effect of greater daylight at school start time. My primary empirical method is cross sectional regression with rich controls for potentially confounding variables. The findings are confirmed by regression discontinuity analysis focused on schools close to time zone boundaries. I quantify the net gain in welfare from having an additional hour of sunlight before school starts by comparing the substantial lifetime earnings benefits for students against the likely societal costs. Essay 2 Student Success and Teaching Assistant Effectiveness In Large Classes considers the impact teaching assistants (TAs) have on student performance. In universities TAs play a crucial role by providing small group instruction in lecture courses with large enrollment. The multiplicity of TAs creates both positive opportunities and negative incentives. On the one hand, some TAs may excel at tasks such as helping struggling students at which other TAs fail. If so, all students may be able to learn better if they can match themselves to the TA that best suits their needs. On the other hand, the multiplicity of TAs means that students in the same class often receive instruction that varies in quality even though they are ultimately graded on the same standard. In this paper we use data from a large lecture course in which students are conditionally randomly assigned to TAs. In addition to administrative data on scores and grades we use survey data which we generated on students' initial preparation, their study habits and their interactions with TAs. We identify the existence of variation among TAs in teaching effectiveness. We also identify how TAs vary in their effectiveness with certain subpopulations of students: the least and best prepared students with different backgrounds and so on. Using our parameter estimates we simulate student achievement under scenarios such as random assignment to TAs, elimination/retraining of the least effective TAs and matching of TAs to students based on initial information to show the potential gains in student welfare from more efficient matching. Essay 3 A Study of Student Majors A Historical Perspective considers whether differing financial returns across degrees are a significant factor in a student's choice of a major. During the late 1990s the U.S. experienced a technology boom that significantly increased the initial salary offers to engineering students and computer science students in particular. These dramatic increases in returns provide an excellent opportunity to examine not only how students respond to salary levels but also to salary trends. The

existing literature has focused on the extent to which differing financial returns can affect a student's choice of undergraduate major. This paper extends the analysis to test if trends in salary levels also affect the share of students selecting into various majors using a comprehensive dataset of all post secondary institutions. I find that students select into majors that offer higher salaries and have greater wage growth. Using a flexible empirical model that allows students to respond to both changes in salary levels and growth I find that the results hold across majors and within engineering disciplines. These results help to explain why for instance the percentage of students choosing to major in computer science grew more rapidly than could be explained by salary level alone. *Getting to Excellence* James A. Johnson, Jr. PhD, 2013-03. This book is about a journey with the Center for Strategic Alliances in Education for School and District Improvement with stakeholders in a school targeted for school improvement. The first chapter puts into context the notion of school its purpose and the incumbent variables of values attitudes organizational and leadership behaviors and instructional practices. Throughout the book the authors look at three contextual boundaries 1 historical 2 the lens of former students and their perceptions of the presence or absence of those variables and 3 a comparison of labeled schools and the views and perceptions of stakeholders with regard to quality equity and adequacy. This is a compelling journey which utilizes quantitative and qualitative data to take a critical look at the processes involved and the strategies used in America's journey in the quest for excellence. The authors story is one of the pursuits of innovation reinvention equity excellence and culturally relevant education experiences that inspire and reframe the discussion about getting to excellence. The book is replete with illustrations of weaknesses hidden in abstract policies institutional persistence and culturally void programs methodologies and practices. It advocates a methodology for arriving at well conceived processes for achieving acceptance and academic excellence through collaboration among those to whom education is important the children and the communities where they live.

Secondary Education in the United States John H. Bishop, 2001 **Teacher Credentials and Student Achievement in High School** Charles T. Clotfelter, Helen F. Ladd, Jacob L. Vigdor, 2007 We use data on statewide end of course tests in North Carolina to examine the relationship between teacher credentials and student achievement at the high school level. The availability of test scores in multiple subjects for each student permits us to estimate a model with student fixed effects which helps minimize any bias associated with the non random distribution of teachers and students among classrooms within schools. We find compelling evidence that teacher credentials affect student achievement in systematic ways and that the magnitudes are large enough to be policy relevant. As a result the uneven distribution of teacher credentials by race and socio economic status of high school students a pattern we also document contributes to achievement gaps in high school.
