

# 10 Facts ABOUT EARTH

## 1 The Earth is Slowing Down

The Earth is slowing down about 17 milliseconds every 100 years. You'll get an extra hour in about another 140 million years.

## The Coldest Place in the Universe: Earth

The coldest object in space is the Boomerang Nebula, it's 1 degree Kelvin, which is -458 degrees Fahrenheit. Scientists at MIT were able to get temperatures down below 1 nano-Kelvin, which is one billionth of a degree Kelvin.

## 3 Earth is Actually Two Planets

Based on the Giant Impact Hypothesis, Theia (a planet in our Solar System) was knocked out of her orbit and collided with the Earth, smashing together to form one planet (and the Moon).

## Earth Loves Water

We now know of many places, even in our own Solar System which contain water. Earth is the only place where water exists in all three states: liquid, ice and vapor.

## 5 Earth is the Densest Planet

A planet's density is measured by comparison to the density of water, which is: 1 gram per cubic centimeter. Earth has the highest density of them all, at 5.5 grams per cubic centimeter.

## Earth isn't a Sphere

Because of gravity and centrifugal force, the Earth is slightly oval in shape. This phenomena happens to a lot of planets and is exaggerated the faster it spins.

## 7 Earth is the Only Planet with Plate Tectonics

There are seven major plate tectonics on Earth. Without these plates, we wouldn't have: earthquakes, volcanoes or eruptions, mountains or even ocean trenches.

## The Best Recycler: Earth

The Earth recycles itself and its surface. The rock cycle transforms Igneous rock into Sedimentary rock, which gets transformed into Metamorphic rock and then repeats itself, over and over.

## 9 Richie Rich: Earth's Oceans

It's estimated that the Earth's oceans have more than 20,000,000 tons of gold in them. Each liter of seawater contains on average about 13/1,000,000,000 of a gram of gold. Not ideal of extraction or mining operations... yet.

## Earth had a Baby

Theia, a planet roughly the size of Mars, was knocked out of its orbit and collided with Earth. As these two planets made whoopee, they gave birth to the Moon. The Earth and the Moon have come to depend on one another, much like a child and its mother.
