globalization Expertly edited by Lene Arnett Jensen the Handbook covers the entire lifespan from the prenatal period to old age It delves deeply into topics such as the development of emotion language cognition morality creativity and religion as well as developmental contexts such as family friends civic institutions school media and work Written by an international group of eminent and cutting edge experts chapters showcase the burgeoning interdisciplinary approach to scholarship that bridges universal and cultural perspectives on human development This cultural developmental approach is a multifaceted flexible and dynamic way to conceptualize theory and research that is in step with the cultural and global realities of human development in the 21st century

Primate Cognition Josep Call, Michael Tomasello, 2024-10-10 First published in 1997 Primate Cognition was a groundbreaking and highly successful book that set the agenda for a new field of study Borrowing theoretical constructs and paradigms from human cognitive science and developmental psychology the book reviewed all of the empirical research existing at that time concerning both physical cognition space and objects tools and causality features and categories and quantities as well as social cognition social knowledge and interaction social strategies and communication social learning and culture and theory of mind Since that time research on primate cognition has burgeoned and this all new second edition mainly focuses on research conducted after 1997 It is divided into two volumes the current volume on Primate Social Cognition and a forthcoming volume on Primate Physical Cognition Existing areas of research are updated with the latest findings and there are several areas of research that for all practical purposes did not exist at the time of the first edition for example on prosocial behavior behavior in social dilemmas and metacognition There is also a chapter on theories of primate social cognition and an account of how the human primate fits into the overall evolutionary picture This second edition of Primate Cognition provides an up to date survey of the field

The Evolution of Rhythm Cognition: Timing in Music and Speech Andrea Ravignani, Henkjan Honing, Sonja A. Kotz, 2018-07-24 Human speech and music share a number of similarities and differences One of the closest similarities is their temporal nature as both i develop over time ii form sequences of temporal intervals possibly differing in duration and acoustical marking by different spectral properties which are perceived as a rhythm and iii generate metrical expectations Human brains are particularly efficient in perceiving producing and processing fine rhythmic information in music and speech However a number of critical questions remain to be answered Where does this human sensitivity for rhythm arise How did rhythm cognition develop in human evolution How did environmental rhythms affect the evolution of brain rhythms Which rhythm specific neural circuits are shared between speech and music or even with other domains Evolutionary processes long time scales often prevent direct observation understanding the psychology of rhythm and its evolution requires a close fitting integration of different perspectives First empirical observations of music and speech in the field are contrasted and generate testable hypotheses Experiments exploring linguistic and musical rhythm are performed across sensory modalities ages and animal species to address questions about domain specificity development and an evolutionary path of rhythm Finally experimental insights are

integrated via synthetic modeling generating testable predictions about brain oscillations underlying rhythm cognition and its evolution Our understanding of the cognitive neurobiological and evolutionary bases of rhythm is rapidly increasing However researchers in different fields often work on parallel potentially converging strands with little mutual awareness This research topic builds a bridge across several disciplines focusing on the cognitive neuroscience of rhythm as an evolutionary process It includes contributions encompassing although not limited to 1 developmental and comparative studies of rhythm e g critical acquisition periods innateness 2 evidence of rhythmic behavior in other species both spontaneous and in controlled experiments 3 comparisons of rhythm processing in music and speech e g behavioral experiments systems neuroscience perspectives on music speech networks 4 evidence on rhythm processing across modalities and domains 5 studies on rhythm in interaction and context social affective etc 6 mathematical and computational e g connectionist symbolic models of rhythmicity as an evolved behavior
