Hazra, 2023-09-14 This detailed volume provides a comprehensive set of experimental protocols and useful strategies to examine the repair of damaged bases via the Base Excision Repair BER pathway in vitro and in cells Beginning with multiple molecular and cellular techniques to examine the excision of damaged bases from double stranded DNA or DNA wrapped in a nucleosome the book continues with sections covering procedures to detect and quantify the damaged bases protein DNA crosslinks and double strand breaks experimental procedures to identify DNA repair protein interactome by conventional tandem affinity purification followed by mass spectroscopy analysis as well as the analysis of genome wide binding of DNA repair proteins and copy number variations of the DNA damage response gene in tumors Written for the highly successful Methods in Molecular Biology series chapters include introductions to their respective topics lists of the necessary materials and reagents step by step and readily reproducible laboratory protocols and tips on troubleshooting and avoiding known pitfalls Authoritative and practical Base Excision Repair Pathway Methods and Protocols serves as a valuable resource for novices and experts trying to examine the repair of various types of DNA lesions in vitro and in cell by the distinct set of proteins in the BER pathway Vascular Immunity and Ischemic Stroke Yanlin Zhang, Xia Wang, Jie Lu, 2024-11-18 Ischemic stroke is among the most severe diseases threatening human health of which atherosclerosis is the main pathophysiological basis In recent years both basic and clinical studies have confirmed that the immune system plays a core regulatory role in the occurrence and development of

atherosclerosis Some patients with systemic immune diseases are more likely to develop atherosclerosis and its severity is higher than in patients without systemic immune disorders Immune cells are also involved in brain tissue damage and repair after ischemic stroke The clinical application of monoclonal antibodies targeting B cell surface molecules such as CD20 and survival factors such as BAFF in some chronic inflammatory diseases such as rheumatoid arthritis and psoriasis also provides new directions for the immunotherapy in ischemic stroke However finding the best target for drug intervention remains the biggest challenge and an attractive target for new strategies for ischemic stroke *Traditional Medicine and Rheumatology* Runyue Huang, Per-Johan Jakobsson, Xiaojuan He, 2021-08-25

Recent Advances of Epigenetics in Crop Biotechnology Clelia De-la-Peña, Raúl Alvarez-Venegas, Christopher Cullis, 2016-05-31 Epigenetics is a new field that explains gene expression at the chromatin structure and organization level. Three principal epigenetic mechanisms are known and hundreds of combinations among them can develop different phenotypic characteristics. DNA methylation, histone modifications and small RNAs have been identified and their functions are being studied in order to understand the mechanisms of interaction and regulation among the different biological processes in plants. Although fundamental epigenetic mechanisms in crop plants are beginning to be elucidated, the comprehension of the different epigenetic mechanisms by which plant gene regulation and phenotype are modified is a major topic to develop in the near future in order to increase crop productivity. Thus, the importance of epigenetics in improving crop productivity is undoubtedly growing. Current research on epigenetics suggests that DNA methylation, histone modifications and small RNAs are involved in almost every aspect of plant life, including agronomically important traits such as flowering time, fruit development, responses to environmental factors, defense response and plant growth. The aim of this Research Topic is to explore the recent advances concerning the role of epigenetics in crop biotechnology as well as to enhance and promote interactions among high quality researchers from different disciplines such as genetics, cell biology, pathology, microbiology and evolutionary biology in order to join forces and decipher the epigenetic mechanisms in crop productivity.

Expression Systems Michael R. Dyson, Yves Durocher, 2007 Protein expression is an increasingly important tool for research on gene function. What is needed is not just a lab manual providing established methods as well as the latest state of the art protocols but also clear advice on what expression system to choose when. *Expression Systems: Methods* Express uniquely fills this need. It covers expression across a broad range of systems including the following: Baculovirus expression vectors, CHO cells, E. coli, HEK293, EBNA1 cells, Lactococcus lactis and other gram positive bacteria, S. cerevisiae, transfected insect cells, Pichia pastoris, mammalian cells using BacMam viruses, lentiviral vectors, wheat germ cell free system. The book takes the reader through how to make an informed choice of appropriate system taking into account the protein target, the time involved, the ultimate use of the expressed protein and the laboratory equipment required. It also provides step by step methods for each system. In addition, the book describes the optimisation of expression strategies, expression engineering using ribosome display and how to select protein variants with improved expression. Every chapter discusses the merits and limitations of the approaches available, describes the key techniques in full practical detail and provides sensible advice for immediate use at the bench.
