Introduction to the Optical Transfer Function Charles Sumner Williams, Orville A. Becklund, 2002 This work covers spatial frequency spread function wave aberration and transfer function and how these concepts are related in an optical system how they are measured and calculated and how they may be useful

Lens Design Fundamentals Rudolf Kingslake, R. Barry Johnson, 2009-11-20 Thoroughly revised and expanded to reflect the substantial changes in the field since its publication in 1978 Strong emphasis on how to effectively use software design packages

indispensable to today's lens designer. Many new lens design problems and examples ranging from simple lenses to complex zoom lenses and mirror systems give insight for both the newcomer and specialist in the field. Rudolf Kingslake is regarded as the American father of lens design; his book, not revised since its publication in 1978, is viewed as a classic in the field. Naturally, the area has developed considerably since the book was published, the most obvious changes being the availability of powerful lens design software packages, theoretical advances, and new surface fabrication technologies. This book provides the skills and knowledge to move into the exciting world of contemporary lens design and develop practical lenses needed for the great variety of 21st century applications. Continuing to focus on fundamental methods and procedures of lens design, this revision by R. Barry Johnson modernizes symbology and nomenclature, improves conceptual clarity, broadens the study of aberrations, enhances discussion of multi-mirror systems, adds tilted and decentered systems with eccentric pupils, explores use of aberrations in the optimization process, enlarges field flattener concepts, expands discussion of image analysis, includes many new exemplary examples to illustrate concepts, and much more. Optical engineers working in lens design will find this book an invaluable guide to lens design in traditional and emerging areas of application; it is also suited to advanced undergraduate or graduate course in lens design principles and as a self-learning tutorial and reference for the practitioner.

Rudolf Kingslake (1903–2003) was a founding faculty member of the Institute of Optics at The University of Rochester (1929) and remained teaching until 1983. Concurrently, in 1937, he became head of the lens design department at Eastman Kodak until his retirement in 1969. Dr. Kingslake published numerous papers, books, and was awarded many patents. He was a Fellow of SPIE and OSA and an OSA President (1947–48). He was awarded the Progress Medal from SMPTE (1978), the Frederic Ives Medal (1973), and the Gold Medal of SPIE (1980). R. Barry Johnson has been involved for over 40 years in lens design, optical systems design, and electro-optical systems engineering. He has been a faculty member at three academic institutions, engaged in optics education and research, co-founder of the Center for Applied Optics at the University of Alabama in Huntsville, employed by a number of companies, and provided consulting services. Dr. Johnson is an SPIE Fellow and Life Member, OSA Fellow, and an SPIE President (1987). He published numerous papers and has been awarded many patents. Dr. Johnson was founder and Chairman of the SPIE Lens Design Working Group (1988–2002), is an active Program Committee member of the International Optical Design Conference, and perennial co-chair of the annual SPIE Current Developments in Lens Design and Optical Engineering Conference. Thoroughly revised and expanded to reflect the substantial changes in the field since its publication in 1978, *Strong emphasis on how to effectively use software design packages* is indispensable to today's lens designer. Many new lens design problems and examples ranging from simple lenses to complex zoom lenses and mirror systems give insight for both the newcomer and specialist in the field.

Applied optics and optical design, part 1., by a.e. conrady Alexander Eugen Conrady, 1957 **Lens Design** Warren J. Smith, 1992 Foundations of Optical System Analysis and Design Lakshminarayan Hazra, 2022-02-06

Since the incorporation of scientific approach in tackling problems of optical

instrumentation analysis and design of optical systems constitute a core area of optical engineering. A large number of software with varying level of scope and applicability is currently available to facilitate the task. However, possession of an optical design software per se is no guarantee for arriving at correct or optimal solutions. The validity and/or optimality of the solutions depend to a large extent on proper formulation of the problem which calls for correct application of principles and theories of optical engineering. On a different note, development of proper experimental setups for investigations in the burgeoning field of optics and photonics calls for a good understanding of these principles and theories. With this backdrop in view, this book presents a holistic treatment of topics like paraxial analysis, aberration theory, Hamiltonian optics, ray optical and wave optical theories of image formation, Fourier optics, structural design, lens design, optimization, global optimization etc. Proper stress is given on exposition of the foundations. The proposed book is designed to provide adequate material for self-learning the subject. For practitioners in related fields, this book is a handy reference. Foundations of Optical System Analysis and Synthesis provides a holistic approach to lens system analysis and design with stress on foundations. Basic knowledge of ray and wave optics for tackling problems of instrumental optics. Proper explanation of approximations made at different stages. Sufficient illustrations for facilitation of understanding. Techniques for reducing the role of heuristics and empiricism in optical lens design. A sourcebook on chronological development of related topics across the globe. This book is composed as a reference book for graduate students, researchers, faculty, scientists and technologists in R & D centres and industry in pursuance of their understanding of related topics and concepts during problem solving in the broad areas of optical, electro-optical and photonic system analysis and design. *Design and Engineering of Optical Systems*, Joseph J. The Optical Journal and Review of Optometry, 1961 *Aberration and Optical Design Theory*, G. G. Slyusarev, 1984
 The first English translation of this classic Russian text explaining the detailed procedures of optical system design. All optical designers will find an interest in evaluating Slyusarev's approaches to aberration theory and in comparing these methods with those developed in the West.
