*Manual* ,1987 Argus is an experimental language system designed to support the construction and execution of distributed  
programs Argus is intended to support only a subset of the applications that could benefit from being implemented by a  
distributed program Two properties distinguish these applications they make use of on line data that must remain consistent  
in spite of concurrency and hardware failures and they provide services under real time constraints that are not severe  
Examples of such applications are office automation systems and banking systems Argus is based on CLU It is largely an  
extension of CLU but there are number of differences Like CLU Argus provides procedures for procedural abstraction  
iterators for control abstraction and clusters for data abstraction In addition Argus provides guardians that encapsulate and  
control access to one or more resources Argus also provides equate modules as a convenient way to refer to constants As in  
CLU modules may be parameterized so that a single module can define a class of related abstractions Keywords Fault

Statistical Databases Josep Domingo-Ferrer,2003-08-01 Inference control in statistical databases also known as statistical  
disclosure limitation or statistical confidentiality is about finding tradeoffs to the tension between the increasing societal  
need for accurate statistical data and the legal and ethical obligation to protect privacy of individuals and enterprises which  
are the source of data for producing statistics Techniques used by intruders to make inferences compromising privacy  
increasingly draw on data mining record linkage knowledge discovery and data analysis and thus statistical inference control  
becomes an integral part of computer science This coherent state of the art survey presents some of the most recent work in  
the field The papers presented together with an introduction are organized in topical sections on tabular data protection

where the newest developments connected to object oriented programming and related areas could be presented and  
discussed Over the last few years object oriented technology has gained widespread use and considerable popularity In  
parallel with this the field has matured scientifically but there is still a lot of room for new ideas and for hot debates over  
fundamental issues as these proceedings show The 22 papers in this volume were selected by the programme committee
