Iterative Identification And Restoration Of Images:

Iterative Identification and Restoration of Images Reginald L. Lagendijk,Jan Biemond,2011-09-15 One of the most intriguing questions in image processing is the problem of recovering the desired or perfect image from a degraded version In many instances one has the feeling that the degradations in the image are such that relevant information is close to being recognizable if only the image could be sharpened just a little This monograph discusses the two essential steps by which this can be achieved namely the topics of image identification and restoration More specifically the goal of image identification is to estimate the properties of the imperfect imaging system blur from the observed degraded image together with some statistical characteristics of the noise and the original uncorrupted image On the basis of these properties the image restoration process computes an estimate of the original image Although there are many textbooks addressing the image identification and restoration problem in a general image processing setting there are hardly any texts which give an indepth treatment of the state of the art in this field This monograph discusses iterative procedures for identifying and restoring images which have been degraded by a linear spatially invariant blur and additive white observation noise As opposed to non iterative methods iterative schemes are able to solve the image restoration problem when formulated as a constrained and spatially variant optimization prob In this way restoration results can be obtained which outperform the lem results of conventional restoration filters

Blind Image Deconvolution Subhasis Chaudhuri, Rajbabu Velmurugan, Renu Rameshan, 2014-09-22. Blind deconvolution is a classical image processing problem which has been investigated by a large number of researchers over the last four decades. The purpose of this monograph is not to propose yet another method for blind image restoration. Rather the basic issue of deconvolvability has been explored from a theoretical view point. Some authors claim very good results while quite a few claim that blind restoration does not work. The authors clearly detail when such methods are expected to work and when they will not. In order to avoid the assumptions needed for convergence analysis in the Fourier domain the authors use a general method of convergence analysis used for alternate minimization based on three point and four point properties of the points in the image space. The authors prove that all points in the image space satisfy the three point property and also derive the conditions under which four point property is satisfied. This provides the conditions under which alternate minimization for blind deconvolution converges with a quadratic prior. Since the convergence properties depend on the chosen priors one should design priors that avoid trivial solutions. Hence a sparsity based solution is also provided for blind deconvolution by using image priors having a cost that increases with the amount of blur which is another way to prevent trivial solutions in joint estimation. This book will be a highly useful resource to the researchers and academicians in the specific area of blind deconvolution.

Motion-Free Super-Resolution Subhasis Chaudhuri, Joshi Manjunath, 2006-06-20. Motion Free Super Resolution is a compilation of very recent work on various methods of generating super resolution (SR) images from a set of low resolution images. The current literature on this topic deals primarily with the use of motion cues for the purpose of generating SR images. These cues have been shown to have their advantages and disadvantages. In contrast, this book shows that cues other than motion can also be used for the same purpose and addresses both the merits and demerits of these new techniques. Motion Free Super Resolution supersedes much of the lead author's previous edited volume Super Resolution Imaging and includes an up to date account of the latest research efforts in this fast moving field. This sequel also features a style of presentation closer to that of a textbook with an emphasis on teaching and explanation rather than scholarly presentation.
