**Tensor Trigonometry** A.S. Ninul, Resume Planimetry includes metric part and trigonometry In geometries of metric spaces from the end of XIX age their tensor forms are widely used However the trigonometry is remained only in its scalar form in a plane The tensor trigonometry is development of the flat scalar trigonometry from Leonard Euler classic forms into general multi dimensional tensor forms with vector and scalar orthoprojections and with step by step increasing complexity and opportunities Described in the book are fundamentals of this new mathematical subject with many initial examples of its applications In theoretic plan the tensor trigonometry complements naturally Analytic Geometry and Linear Algebra In practical plan it gives the clear instrument for solutions of various geometric and physical problems in homogeneous isotropic spaces such as Euclidean quasi and pseudo Euclidean ones In these spaces the tensor trigonometry gives very clear general laws of motions in complete forms and with polar decompositions into principal and secondary motions their descriptive trigonometric vector models which are applicable also to n dimensional non Euclidean geometries in subspaces of constant radius embedded in enveloping metric spaces and in the theory of relativity In STR these applications were considered till a trigonometric 4D pseudoanalog of the 3D classic theory by Frenet Serret with absolute differentially geometric kinematic and dynamic characteristics in the current points of a world line New methods of the tensor trigonometry can be also useful in other domains of mathematics and physics The book is intended for researchers in the fields of multi dimensional spaces analytic geometry linear algebra with theory of matrices non Euclidean geometries theory of relativity and also to all those who is interested in new knowledges and applications given by exact sciences It may be useful for educational purposes on this new subject in the university departments of algebra geometry and physics This book is an updated author s English version of the original Russian scientific monograph *Tensor Trigonometry Theory and Applications* Moscow Publisher MIR 2004 336p ISBN 10 5 03 003717 9 and ISBN 13 978 5 03 003717 2 On the Google books there is an original Russian edition of this book 2004 <https://books.google.ru/books/about?id=HGgjEAAAQBAJ> *Trigonometric And Hyperbolic Generated Approximation Theory* George A Anastassiou, 2024-11-28 This monograph is a testimony of the impact over Computational Analysis of some new trigonometric and hyperbolic types of Taylor s formulae with integral remainders producing a rich collection of approximations of a very wide spectrum This volume covers perturbed neural network approximations by themselves and with their connections to Brownian motion and stochastic processes univariate and multivariate analytical inequalities both ordinary and fractional Korovkin theory and approximations by singular integrals both univariate and multivariate cases These results are expected to find applications in the many areas of Pure and Applied Mathematics Computer Science Engineering Artificial Intelligence Machine Learning Deep Learning Analytical Inequalities Approximation Theory Statistics Economics amongst others Thus this treatise is suitable for researchers graduate students practitioners and seminars of related disciplines and serves well as an invaluable resource for all Science

THE PRESENT six figure trigonometric tables complete the series of tables of the natural values of the trigonometric functions published by Fizmatgiz Now that small computers have become very widely available almost all computations are carried out by machine and the majority of computational schemes are suited to this purpose The situation calls urgently for the availability of tables containing the natural values of all six trigonometric functions The following special factor emerges here In logarithmic computations the same relative accuracy is guaranteed more or less automatically for all values of the argument the number of correct significant figures in the result is either equal to or in rare cases one less than the number of significant figures in the mantissa of the logarithm In computations with natural values of the functions the same relative accuracy is guaranteed in practice for all arguments only by having a constant number of significant figures throughout the tables Until recently however tables of the natural values of the trigonometric functions have been compiled both in Russia and abroad with the same number of places after the decimal point which leads to a loss of accuracy when computing with functions of small angles In view of this there is an urgent need for tables of the natural values of the trigonometric functions with a constant number of significant figures which substantially guarantees roughly the same relative accuracy for all angles The present tables together with the following already published by Fizmatgiz

Five figure Tables L S Khrenov 1954  
Five figure Tables with the Argument in Time L S Khrenov 1954  
Seven figure Tables L S Khrenov 1956 and Six figure Tables with the Argument in Time S A Angelov 1957 form a complete series with the same number of significant figures satisfying the main requirements of a wide variety of computers When compiling the present tables use was made for purposes of collation of the following tables of the natural values of the trigonometric functions The Five figure Table of H Andoyer Paris 1915 1918 the Eight figure Table of J Peters Berlin 1939 the Seven figure Table of L S Khrenov 2nd ed Gostekhizdat 1956 the Seven figure Table of H C Ives and the Eight figure Tables of the Logarithm of Numbers and of the Trigonometric functions of J Bauschinger and J Peters Geodezizdat 1942 and 1944
