Research Methodology in Agricultural Sciences Jayne Njeri Mugwe, Steven Runo, 2026-01-01 This authored textbook provides a comprehensive guide to the methods and methodologies currently used in agricultural research covering the entire process from conceptualisation to reporting. Recognising the interdisciplinary nature of agricultural science the book integrates both biophysical and social science approaches including experimental design on farm research surveys, qualitative and mixed methods research and impact evaluation. It also addresses both quantitative and qualitative data analysis. In addition to methodological guidance the book offers practical support in scientific writing, thesis development, journal article publication and science communication. Theories and concepts are clearly explained using real world examples, flow diagrams, photographs and case studies to enhance understanding. Designed to support students and early career researchers this book helps ease the steep learning curve associated with conducting credible, ethical and impactful research. It will be a valuable resource for students, faculty, researchers, professionals, agricultural scientists and policy makers in both national and international contexts.

The Commons, Plant Breeding and Agricultural Research Fabien Girard, Christine Frison, 2018-03-09 The joint challenges of population increase, food security and conservation of agrobiodiversity demand a rethink of plant breeding and agricultural research from a different perspective. While more food is undeniably needed, the key question is rather about how to produce it in a way that sustains biological diversity and mitigates climate change. This book shows how social sciences and, more especially, law can contribute towards reconfiguring current legal frameworks in order to achieve a better balance between the necessary requirements of agricultural innovation and the need for protection of agrobiodiversity. On the assumption that the concept of property can be rethought against the background of the right to include so as to endow others with a common right to access genetic resources, several international instruments and contractual arrangements drawn from the plant breeding field including the Convention on Biological Diversity, technology exchange clearing houses and open sources licenses receive special consideration. In addition, the authors explore the tension between ownership and the free circulation and exchange of germplasm and issues such as genetic resources managed by local and indigenous communities, the ITPGRFA and participatory plant breeding programmes. As a whole, the book demonstrates the relevance of
