Algae in the Bioeconomy Jean-Luc Wertz, Serge Perez, 2024-02-16 Algae play an important ecological role as oxygen producers and carbon sequesters and are the food base for all aquatic life. Algae are economically important as a source of crude oil, food and feed, and pharmaceutical and industrial products. High value and sustainable products from algae are already economically viable and can be a fundamental driver for fuel production. *Algae in the Bioeconomy* provides a detailed overview of the chemical composition of algae and shows that an integrated biorefinery approach is necessary for large scale algae production and conversion where multiple products are produced. This book serves as a unique compendium of knowledge covering the essential features of algae and their applications. Discusses the structural chemistry and biology of micro and macroalgal components. Describes classification, occurrence, conversion and production of micro and macroalgae. Offers strategies for optimal use of micro and macroalgae in the bioeconomy including regional strategies in the EU, US, China, India, Malaysia, Norway and Chile. Features forewords from international experts offering both a scientific and an economic strategic viewpoint. This book is intended for an interdisciplinary audience in chemical engineering, biotechnology and environmental science and engineering, promoting research development and application of algae as a sustainable resource.

*Leapfrogging Africa* Reiner Klingholz, Sabine Sütterlin, Alisa Kaps, Catherina Hinz, 2020-10-15 In this study we look at the potential for development leaps in Africa in three key sectors that provided the basis for socioeconomic development around the world: health, education and agriculture. Advances in these sectors increase the human capital, create jobs and economic opportunities, and have a positive influence on each other. Healthy and well-fed children can learn better, hygiene and better medical care diminish infant mortality, which reduces the desire for a large number of children. Education for women promotes gender equality and causes birth rates to fall further. This creates a population structure under which the economy can grow particularly well. A demographic dividend becomes possible.
