**Envisioning the Faculty for the Twenty-First Century** Adrianna Kezar, Daniel Maxey, 2016-09-12 The institution of tenure once a cornerstone of American colleges and universities is rapidly eroding Today the majority of faculty positions are

part time or limited term appointments a radical change that has resulted more from circumstance than from thoughtful planning As colleges and universities evolve to meet the changing demands of society how might their leaders design viable alternative faculty models for the future Envisioning the Faculty for the Twenty First Century weighs the concerns of university administrators professors adjuncts and students in order to critically assess emerging faculty models and offer informed policy recommendations Cognizant of the financial pressures that have led many universities to favor short term faculty contracts higher education experts Adrianna Kezar and Daniel Maxey assemble a top notch roster of contributors to investigate whether there are ways to modify the existing system or promote new faculty models They suggest how colleges and universities might rethink their procedures for faculty development hiring scheduling and evaluation in order to maintain a campus environment that still fosters faculty service and student centered learning Even as it asks urgent questions about how to retain the best elements of American higher education Envisioning the Faculty for the Twenty First Century also examines the opportunities that systemic changes might create Ultimately it provides some starting points for how colleges and universities might best respond to the rapidly evolving needs of an increasingly global society

*Machine Learning with Go Quick Start Guide* Michael Bironneau, Toby Coleman, 2019-05-31 This quick start guide will bring the readers to a basic level of understanding when it comes to the Machine Learning ML development lifecycle will introduce Go ML libraries and then will exemplify common ML methods such as Classification Regression and Clustering Key Features Your handy guide to building machine learning workflows in Go for real world scenarios Build predictive models using the popular supervised and unsupervised machine learning techniques Learn all about deployment strategies and take your ML application from prototype to production ready Book Description Machine learning is an essential part of today's data driven world and is extensively used across industries including financial forecasting robotics and web technology This book will teach you how to efficiently develop machine learning applications in Go The book starts with an introduction to machine learning and its development process explaining the types of problems that it aims to solve and the solutions it offers It then covers setting up a frictionless Go development environment including running Go interactively with Jupyter notebooks Finally common data processing techniques are introduced The book then teaches the reader about supervised and unsupervised learning techniques through worked examples that include the implementation of evaluation metrics These worked examples make use of the prominent open source libraries GoML and Gonum The book also teaches readers how to load a pre trained model and use it to make predictions It then moves on to the operational side of running machine learning applications deployment Continuous Integration and helpful advice for effective logging and monitoring At the end of the book readers will learn how to set up a machine learning project for success formulating realistic success criteria and accurately translating business requirements into technical ones What you will learn Understand the types of problem that machine learning solves and the various approaches Import pre process and explore data with Go to make it ready for machine learning algorithms Visualize
