

FREE-RESPONSE QUESTION: QUANTITATIVE/QUALITATIVE TRANSLATION

1. A small sphere of mass M is suspended by a string of length L . The sphere is made to move in a horizontal circle of radius R at a constant speed, as shown above. The center of the circle is labeled point C , and the string makes an θ_0 with the vertical.
 - (A) Two students are discussing the motion of the sphere and make the following statements.

Student 1: None of the forces exerted on the sphere are in the direction of point C , the center of the circular path. Therefore, I don't see how there can be a centripetal force exerted on the sphere to make it move in a circle.

Student 2: I see another problem. The tension force exerted by the string is at an angle from the vertical. Therefore, its vertical component must be less than the weight Mg of the sphere. That means the net force on the sphere has a downward vertical component, and the sphere should move downward as well as moving around in a circle.

 - i. What is one aspect of Student 1's reasoning that is incorrect?
 - ii. What is one aspect of Student 2's reasoning that is incorrect?
 - (B)
 - i. Derive an equation for the magnitude of the net force exerted on the sphere. Express your answer in terms of M , θ_0 , and physical constants, as appropriate.
 - ii. Describe one aspect or step in your derivation of part (b)(i) that can be correctly linked to your answer to either part (a)(i) or part (a)(ii).
