

## The Respiratory System

The respiratory system is responsible for:

- 
- 
- 
- 

Respiratory system consists of:

- 
- 
- 
- 

Major role of the respiratory system (from \_\_\_\_\_ to \_\_\_\_\_)

- Gas exchange in \_\_\_\_\_ part of the respiratory system

Alveoli = tube of gas exchange

### Gas Exchange

- The terminal branch enlarges into the alveoli, eventually creating the small air sacs called \_\_\_\_\_
- Alveoli have many thin walls and are surrounded by \_\_\_\_\_
  - Oxygen and carbon dioxide diffuse through the respiratory and alveolar walls to move between the respiratory and circulatory systems
- The circulatory system transports \_\_\_\_\_ throughout the body

### Breathing

- Breathing moves air into and out of the lungs
- Inhalation occurs when the \_\_\_\_\_ move in, \_\_\_\_\_ the air
- Exhalation occurs when the \_\_\_\_\_ move out, \_\_\_\_\_ the air out of the lungs, which causes the \_\_\_\_\_ of the air in the lungs
- The lungs expand the breathing in with \_\_\_\_\_, the volume of air in the lungs. The pressure \_\_\_\_\_ and air flows out with the \_\_\_\_\_ of the lungs
- The lungs can facilitate the opposite happens

*Resources in Vocational Education*,1979 Autonomous and Autonomic Systems: With Applications to NASA Intelligent Spacecraft Operations and Exploration Systems Walt Truszkowski,Harold Hallock,Christopher Rouff,Jay Karlin,James Rash,Michael Hinchey,Roy Sterritt,2009-11-12

In the early 1990s NASA Goddard Space Flight Center started researching and developing autonomous and autonomic ground and spacecraft control systems for future NASA missions This research started by experimenting with and developing expert systems to automate ground station software and reduce the number of people needed to control a spacecraft This was followed by research into agent based technology to develop autonomous ground control and spacecraft Research into this area has now evolved into using the concepts of autonomic systems to make future space missions self managing and giving them a high degree of survivability in the harsh environments in which they operate This book describes much of the results of this research In addition it aims to discuss the needed software to make future NASA space missions more

completely autonomous and autonomic The core of the software for these new missions has been written for other applications or is being applied gradually in current missions or is in current development It is intended that this book should document how NASA missions are becoming more autonomous and autonomic and should point to the way of making future missions highly autonomous and autonomic What is not covered is the supporting hardware of these missions or the intricate software that implements orbit and attitude determination on board resource allocation or planning and scheduling though we refer to these technologies and give references for the interested reader
