*Comprehensive Healthcare Simulation: Nursing* Jared M. Kutzin, KT Waxman, Connie M. Lopez, Debra Kiegaldie, 2024-02-28 Simulation based education is a rapidly expanding field. The use of simulation was pioneered in anesthesiology and nursing over 50 years ago. However, recent advances have allowed simulation to become commonplace in many different educational environments. These environments include undergraduate nursing education, graduate nursing education, and post graduate clinical education. This book provides an in depth review of the common simulation techniques used in each setting and then dives deeper into each of the practice areas that nurses use for simulation. The book offers an overview for novice simulation users as well as a resource for simulation users looking to expand into other uses. Capturing the latest advances, this book brings a comprehensive review of graduate and post graduate clinical simulation together in a single resource.

*Reference and Information Services* Richard E. Bopp, Linda C. Smith, 2001 Thoroughly revised and expanded to reflect current developments in the field, this text is designed to provide the beginning student of library and information science with an overview of the most important tools for general reference work and the concepts and theory behind today's reference services. The 21 chapters are divided into two parts. The first 11 chapters deal with concepts and theory and are topical. They cover such areas as ethical aspects of reference services, reference interview, the principles and goals of library instruction, bibliographic control, and search strategies, training and continuing education for reference staff, the evaluation of reference services, and the management of these services. In many cases, specific applications in different types of libraries are pointed out. Expanded coverage of electronic reference service is provided by two full chapters devoted to basic principles and current trends in this area. A separate chapter covers unique approaches to reference service for special groups. Part 2 describes the general principles and sources for selecting and evaluating reference tools and the principles for building a reference collection. The remaining chapters discuss the characteristics and uses of particular types of reference tools. This new edition describes a greater number of titles of each type as well as the formulation of strategies for the effective use of specific sources or groups of sources. Scenarios in particular library settings conclude each chapter, offering realistic reference questions and appropriate search strategies. Throughout the text, boxes are used to highlight specific issues, concepts, and search strategies that underlie contemporary reference services. Selected important sources for further reading are listed at the end of each chapter. This text presents the essential theory and practical knowledge necessary for an initial reference course. Its broad scope and organizational clarity should benefit students and practitioners alike.

*Information Retrieval: A Biomedical and Health Perspective* William Hersh, 2020-07-22 This extensively revised 4th edition comprehensively covers information retrieval from a biomedical and health perspective, providing an understanding of the theory, implementation, and evaluation of information retrieval systems in the biomedical and health domain.
