

APES 2021 #1 (Set 1) FRQ-Aligned Multiple Choice Questions - KEY

Many justifications for each correct multiple choice question can be found within the Chief Reader Report and Sample Student Responses found [here](#).

1. Which response below would earn the FRQ point?
 - a. The independent variable is the compass direction the PV panels are facing.
 - b. The independent variable of the experiment will be the sun or amount of light that is being measured.
 - c. The independent variable is the PV panels.
 - d. The independent variable in the experiment would be the amount of sunshine in the location per day or the time of year.
2. Which response below would earn the FRQ point?
 - a. The dependent variable is the facing direction, how much electricity in kWh is produced.
 - b. The amount of electricity produced in kWh.
 - c. The dependent variable is the position or direction of the panels that will change.
 - d. The dependent variable is the amount of solar energy the panels receive during this experiment.
3. Which response below would **NOT** earn the FRQ point?
 - a. A reasonable hypothesis for this experiment would be that the panels will be able to produce the most amount of electricity when facing the sun rises from which would be the east.
 - b. If the panels face either east or west then the amount of electricity generated will increase because the sun rises and sets in those directions.
 - c. If the PV panels are installed on a roof in the northern hemisphere, the greatest amount of electricity produced will be when facing south.
 - d. If you install photovoltaic panels on a roof of a house, will it help provide electricity for the home?
4. Which response below would earn the FRQ point?
 - a. One variable that could affect the results of the study is weather. The amount of cloud cover could heavily change energy output.
 - b. One variable that could change the results of the study that was not discussed was the weather and how it can affect the amount of exposure the solar panels have to light.
 - c. One variable that isn't discussed is the amount of condensation and precipitation in the area. This can affect the results because clouds block sunlight so areas with more clouds would generate less electricity.
 - d. The weather could affect the results of the study because if the sky is overcast then the solar panels will receive less sun due to the clouds blocking the sun.
5. Which response below would **NOT** earn the FRQ point?
 - a. The turbine is the location of the hydroelectric dam where water's kinetic energy turns into mechanical energy.
 - b. Kinetic energy turns to mechanical energy at the generator.
 - c. Kinetic energy turns to mechanical energy in the turbine section of the generator.
 - d. Turbine
6. Which response below would **NOT** earn the FRQ point?
 - a. By being higher in elevation it stores potential energy that can be converted to kinetic energy to power the turbine when released downhill.
 - b. The water in the storage reservoir contains a lot of water being contained at a higher altitude than where the turbine is. As gravity pulls down the water from potential to kinetic energy, this increases the rate at which electricity is generated.
 - c. It has potential energy because the water from there creates kinetic energy and then that kinetic energy is turned to mechanical energy.
 - d. Water in the storage has potential energy because it is above the generator. Gravity gives it its potential energy when it comes down.
