Example 2: Alexis and Colin own a car and a pickup truck. They noticed that the odometers of the two vehicles gave different values for the same distance. As part of their investigation into the cause, they put a chalk mark on the outer edge of a tire on each vehicle. The following graphs show the height of the tires as they rotated while the vehicles were driven at the same slow, constant speed. What can you determine about the characteristics of the tires from these graphs?

Car

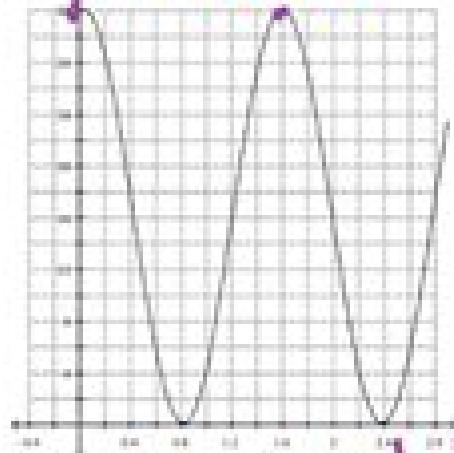

max - 24
min - 0
tire diameter

$$\text{mid } \frac{24+0}{2} = 12$$

Period: 1.25

Truck

max 32
min 0
diameter 32
 $\frac{32+0}{2} = 16$ mid

Period: 1.65

$$C = 2\pi r$$

For learners of advanced circuit analysis network analysis and linear systems **Coherent Atomic Manipulation and Cooling** Alexander J. Dunning, 2015-08-18 This work unites the concepts of laser cooling and matter wave interferometry to develop an interferometric laser cooling technique in an experimental system of cold rubidium atoms. Serving as an introduction to graduate level coherent optical atomic manipulation the thesis describes the theory of stimulated Raman transitions and atom interferometry along with the experimental methods for preparing and manipulating cold atoms before building on these foundations to explore tailored optical pulse sequences and novel atomic cooling techniques. Interferometric cooling originally proposed by Weitz and H nsch in 2000 is based upon the coherent broadband laser pulses of Ramsey interferometry and in principle allows laser cooling of atomic and molecular species outside the scope of traditional Doppler laser cooling. On the path toward cooling composite pulses quantum error correction methods developed by chemists to mitigate the effects of inhomogeneities in NMR spectroscopy are investigated with a view to improving the performance of atom interferometers [Electronics Applications Sourcebook](#) Harry L.
