Arm Assembly Language - An Introduction (Second Edition) J. R. Gibson, 2011 An introductory text describing the ARM assembly language and its use for simple programming tasks Co-verification of Hardware and Software for ARM SoC Design Jason Andrews, 2004-09-04 Hardware software co verification is how to make sure that embedded system software works correctly with the hardware and that the hardware has been properly designed to run the software successfully before large sums are spent on prototypes or manufacturing This is the first book to apply this verification technique to the rapidly growing field of embedded systems on a chip SoC As traditional embedded system design evolves into single chip design embedded engineers must be armed with the necessary information to make educated decisions about which tools and methodology to deploy SoC verification requires a mix of expertise from the disciplines of microprocessor and computer architecture logic design and simulation and C and Assembly language embedded software Until now the relevant information on how it all fits together has not been available Andrews a recognized expert provides in depth information about how co verification really works how to be successful using it and pitfalls to avoid He illustrates these concepts using concrete examples with the ARM core a technology that has the dominant market share in embedded system product design The companion CD ROM contains all source code used in the design examples a searchable e book version and useful design tools The only book on verification for systems on a chip SoC on the market Will save engineers and their companies time and money by showing them how to speed up the testing process while still avoiding costly mistakes Design examples use the ARM core the dominant technology in SoC and all the source code is included on the accompanying CD Rom so engineers can easily use it in their own designs Field-Programmable Logic and Applications Gordon Brebner, Roger Woods, 2003-05-15 This book constitutes the refereed proceedings of the 11th International Conference on Field Programmable Logic and Application FPL 2001 held in Belfast Northern Ireland UK in August 2001 The 56 revised full papers and 15 short papers presented were carefully reviewed and selected from a total of 117 submissions The book offers topical sections on architectural framework place and route architecture DSP synthesis encryption runtime reconfiguration graphics and vision networking processor interaction applications methodology loops and systolic image processing faults and arithmetic Solutions on Embedded Systems Massimo Conti, Simone Orcioni, Natividad Martínez Madrid, Ralf E.D. Seepold, 2011-04-11 Embedded systems have an increasing importance in our everyday lives The growing complexity of embedded systems and the emerging trend to interconnections between them lead to new challenges Intelligent solutions are necessary to overcome these challenges and to provide reliable and secure systems to the customer under a strict time and financial budget Solutions on Embedded Systems documents results of several innovative approaches that provide intelligent solutions in embedded systems The objective is to present mature approaches to provide detailed information on the implementation and to discuss the results obtained Cryptographic Hardware and Embedded Systems -- CHES 2012

Emmanuel Prouff, Patrick R.
