## Atls 9th Edition:

**Trauma Surgery** S. Di Saverio, G. Tugnoli, F. Catena, L. Ansaloni, N. Naidoo, 2013-12-13 Trauma surgery has increasingly become a specialized field inspired by different principles and philosophy. A good trauma surgeon is a surgeon who knows how to perform abdominal, vascular, thoracic, urologic, gynecologic, and orthopaedic procedures and is able to repair multiple traumatic injuries in the best sequence possible. In this first volume, practical up-to-date guidance is provided on the optimal critical care and ICU management of trauma patients. In addition, individual chapters focus on specific injuries in orthopaedic trauma and especially spinal trauma and neurotrauma, with the aim of providing a fresh view of the surgical approach and practical suggestions for improving the skills of treating surgeons. Educational issues and the organization of a trauma center are also covered. The volume will be a handy pocket guide for trainee surgeons and any surgeon, physician, or nurse who treats trauma patients. It will be particularly relevant for emergency department physicians, critical care and ICU doctors, orthopaedic surgeons, neurosurgeons, and professionals responsible for trauma care and decision-making programs of trauma education or organization of a trauma center. Also available: Trauma Surgery Vol 2: Thoracic and Abdominal Trauma.

**Pediatric Trauma Care II** AHC Media, LLC, 2014-03-17 Pediatric trauma continues to have a significant impact on the health and well-being of children in the United States. Trauma continues to be the leading cause of death in children 1 to 18 years of age and accounted for more than 14 000 deaths among all children 0 to 18 years of age. In 2008, there were more than 8.6 million non-fatal injuries among newborns to 18-year-olds, with an injury rate of greater than 1 in 10. There is little debate that a coordinated effort and pediatric-specific advances in pediatric trauma systems, prehospital care, and hospital care and injury prevention can have a positive impact on pediatric trauma outcomes in the United States. However, there are still gaps in access to centers that deliver pediatric focused trauma care, especially in rural areas. Furthermore, there are differing views between different centers regarding the optimal approach to the initial evaluation and management of the pediatric trauma patient. This book is targeted to review critical aspects of the care of the pediatric trauma patient, highlighting the most common and critical injuries encountered in the acute care setting.
