

Changing Tires

Position jack under bumper as shown. Set parking brake, block diagonally opposite wheel, remove hub cap and loosen wheel nuts. Set small lever on jack to UP position, and using the wheel nut wrench as the jack handle, raise car until the tire clears the ground. Remove the wheel and put on the spare, tightening the wheel nuts. Move the jack control lever to DOWN position and lower car one notch at a time until wheel touches ground. Retighten wheel nuts and replace hub caps.

CAUTION: Never run the engine with car on jack, especially if the car is equipped with a Foxtraction rear axle.

For Maximum Tire Life

- 1. Keep tires properly inflated.
- 2. Check regularly for cuts, bruises and puncturing objects. Nails etc. will often be carried in the tire with no noticeable loss of air. Do not remove a puncturing object until prepared to change or repair the tire.
- 3. Avoid sudden starts and stops; take curves and corners slowly.
- 4. Avoid driving over curbs, sharp objects or chuckholes.
- 5. Have wheel alignment checked periodically, especially when tires show unusual wear.
- 6. Rotate tires every 6000 miles as shown in diagram.
