Assessing Historical Thinking and Understanding Bruce A. VanSledright, 2013-07-31 *Assessing Historical Thinking and Understanding* advocates for a fundamental change in how educators think about making sense of learners developing cognition and understanding in history. Author Bruce VanSledright argues that traditional and typical standardized testing approaches are seldom up to the task of measuring the more complex understandings students are asked to attain as they cannot fully assess what the student knows. Rather, he points forward along a path toward changes in learning, teaching, and assessing that closely aligns with the Common Core State Standards. He delves into the types of history knowledge the standards require, illustrates how they can be applied in use in history learning contexts, and theorizes how the standards might fit together cognitively to produce deep historical understandings among students in teaching learning contexts. By providing a variety of assessment strategies and items that align with the standards and identifying rich, useful assessment rubrics applicable to the different types of assessments, he offers an important resource for social studies teachers and curriculum writers alike.

Water Security in the Mediterranean Region Andrea Scozzari, Bouabid El Mansouri, 2011-09-08 The role of water in our communities from local to regional and right up to global levels poses a series of key questions about climate change, about the anthropogenic impact on the environment, and about all the interconnected actions and events that affect the availability and quality of the resource. All these questions share a common demand for more scientific knowledge and information. In this particular context, the disciplinary boundaries are fading, and there is a growing need to create broader connections and wider collaborative interdisciplinary groups aimed at building an integrated knowledge base to serve not only stakeholders but also the whole of society. Only in this way can we hope to respond effectively to the challenges and changing dynamics of human hydrologic systems. Following this concept, contributors from multiple disciplinary backgrounds such as Law, Studies, Hydrogeology, Monitoring and Information Technologies, Geophysics, Geochemistry, Environmental Sciences, Systems Engineering, Economics, and Social Studies joined forces and interacted in this workshop. The present book reports the proceedings of this three-day ARW Advanced Research Workshop and explores different aspects of the environmental security assessment process, focusing on the assessment, monitoring, and management of water resources and giving an overview of the related scientific knowledge.

How Fear and Stress Shape the Mind Luke R. Johnson, 2016-09-26 The experience of fear and stress leaves an indelible trace on the brain. This indelible trace is observed as both changes in behavior and changes in neuronal structure and function. Fear and stress interact on many levels. The experience of stress may lead to the formation of a fearful memory trace of a place or reminder cue, and fearful memory formation is regulated by the extent of concurrent stress. The concurrent experience of fear and stress may amplify fear and slow fear extinction, which may lead to pathology. Fear memory formation involves changes in synaptic plasticity, while stress and glucocorticoids change neuronal structure. Thus, both neurons and synapses are changed. These changes can be identified

visualised and mapped within focused microcircuits In this Research Topic we focus on current advances in both the neurobiology and behavioral consequences of fear and stress
