

## Biology Dry Lab: EVIDENCE OF EVOLUTION

**INTRODUCTION:** Evidence has been found to indicate that living things have changed gradually during their natural history. The study of fossils as well as embryology, biochemistry, and comparative anatomy provides evidence for evolution.

**OBJECTIVE:** In this lab activity you will learn about homologous, analogous, vestigial structures, fossils, embryology and biochemistry and their significance to evolution theory.

**MATERIALS:** Map Periodic

### PROCEDURES:

#### 1. COMPARATIVE ANATOMY

##### HOMOLOGOUS STRUCTURES

1. Carefully examine the drawings of the bones. Look for **anatomical** among the various animals: a. **COLOR** each part of the human arm a different color. (All bones of the wrist should be the same color, the bone group of the hand should be a different single color.) Then **color** the corresponding bone in each of the other animals the same color as the human bone.
- b. In Table 1 (question #2 on the **Answer Sheet**) describe the **function** of each set of bones and **answer** the questions.)

##### ANALOGOUS STRUCTURES

2. Examine the butterfly wing and the bird wing. Answer questions 4 - 6 on the answer sheet.

##### VESTIGIAL STRUCTURES

Gradual changes have occurred through time that have in some cases reduced or removed the function of some body structures and organs. The **pelagic fish** and the **leg bones of snakes** are examples of this phenomenon.

3. The cave fish and minnow are related, but the cave fish is blind. Answer questions 7-9 on the answer sheet.

4. Read the list of human vestigial structures in Table 2 (question #9). Suggest a **possible function** for each structure and **explain why** it became vestigial. Then complete questions 10-12.

##### EVIDENCE FROM EMBRYOLOGY

Evolution occurs slowly. In most cases, it is not possible to observe evolution in progress. However, evidence

**Evolution and Religious Creation Myths : How Scientists Respond** Paul F. Lurquin School of Molecular Biosciences Washington State University, Linda Stone Department of Anthropology Washington State University, 2007-06-08 Polls show that 45% of the American public believes that humans were created about 10 000 years ago and that evolution is non-existent. Another 25% believes that changes in the natural world are directed by a supernatural being with a particular goal in mind. This thinking clashes frontally with scientific findings obtained in the past 150 years. A large portion of the general public espouses the views of creationists and their descendants and ignores or is unaware of scientific advances. Critical thinking about the natural world within a scientific framework is lacking in the USA and many parts of the world. This manuscript provides a multidisciplinary explanation and defense for the science of evolution not just Darwinism as it is being challenged by arguments for intelligent design and other creation myths. It draws in the life physical and social sciences and recent studies of human evolution that rely much on the idea of change over time which is evolution writ large. It puts the evolution ID issue into international perspective by including opinions held in world religions other than Christianity. It is clearly written and also can easily be used as a guide for those with some science background. The authors make a convincing case that other books do not achieve this as much as they do in this work. The book is written for a whole spectrum of educated people including teachers and teachers in training who are interested in the broad issues of the origins of the universe, life and humans and who may not quite grasp the potential magnitude of the negative influence on all of science education of people embracing creationist and ID thinking. This includes high school teachers and people on boards of education and in municipal governments anyone involved in education. It could be used also in college courses such as contemporary social issues and Science and Society sometimes taught by sociologists and scientists. The authors show that when they are teleological, dogmatic or politically inspired religious and creation myths threaten scientific efforts. The book does not require any extensive knowledge of science. The principle of change over time pervades all of science from cosmology to the search for the origin of life to human physical and cultural evolution. The book educates readers on scientific matters that overwhelmingly support the idea of evolution not only in the living world but also in physical and social science. It explains too how evolution physical and biological is a random unguided process whose roots can be already found in quantum physics.
