Machine Vision and Machine Learning for Plant Phenotyping and Precision Agriculture Huajian Liu, Zhanyou Xu, 2024-01-18 Plant phenotyping PP describes the physiological and biochemical properties of plants affected by both genotypes and environments. It is an emerging research field that is assisting the breeding and cultivation of new crop varieties to be more productive and resilient to challenging environments. Precision agriculture PA uses sensing technologies to observe crops and then manage them optimally to ensure that they grow in healthy conditions have maximum productivity and have minimal negative effects on the environment. Traditionally the observation of plant traits heavily relies on human experts which is labor intensive time consuming and subjective. Automatic crop traits measurement in PP and PA are two different fields but they share the same sensing and data processing technologies in many respects. Recently driven by computer and sensor technologies machine vision MV and machine learning ML have contributed to accurate high throughput and nondestructive plant phenotyping and precision agriculture. However these technologies are still in their infant stage and there are many challenges and questions related to them that still need to be addressed. The goal of this Research Topic is to provide a platform to share the latest research results on the application of MV and ML for PP and PA. It aims to highlight cutting edge technologies bottle necks and future research directions for MV and ML in crop breeding, crop cultivation, disease management, weed control and pest control.

An Applied Guide to Process and Plant Design Sean Moran, 2019-06-12 An Applied Guide to Process and Plant Design 2nd edition is a guide to process plant design for both students and professional engineers. The book covers plant layout and the use of spreadsheet programs and key drawings produced by professional engineers as aids to design subjects that are usually learned on the job rather than in education. You will learn how to produce smarter plant design through the use of computer tools including Excel and AutoCAD, What If Analysis, statistical tools and Visual Basic for more complex problems. The book also includes a wealth of selection tables covering the key aspects of professional plant design which engineering students and early career engineers tend to find most challenging. Professor Moran draws on over 20 years experience in process design to create an essential foundational book ideal for those who are new to process design compliant with both professional practice and the IChemE degree accreditation guidelines. Includes new and expanded content including illustrative case studies and practical examples. Explains how to deliver a process design that meets both business and safety criteria. Covers plant layout and the use of spreadsheet programs and key drawings as aids to design. Includes a comprehensive set of selection tables covering aspects of professional plant design which early career designers find most challenging.
