Teaching and Learning Mathematics Online James P. Howard, II, John F. Beyers, 2025-06-30 Teaching and Learning Mathematics Online Second Edition continues to present meaningful and practical solutions for teaching mathematics and statistics online. It focuses on the problems observed by mathematics instructors currently working in the field who strive to hone their craft and share best practices with the community. The book provides a set of standard practices improving the quality of online teaching and the learning of mathematics. Instructors will benefit from learning new techniques and approaches to delivering content. New to the Second Edition: Nine brand new chapters: Reflections on the lessons of COVID 19, Explorations of new technological opportunities. *Students at Risk of School Failure* José Jesús Gázquez, José Carlos Núñez, 2018-10-18 The main objective of this Research Topic is to determine the conditions that place students at risk of school failure, identifying student and context variables. In spite of the fact that there is currently little doubt about how one learns and how to teach in some countries of the developed world, there is still a high rate of school failure. Although the term school failure is a very complex construct insofar as its causes, consequences, and development from the field of educational psychology, the construct student engagement has recently gained special interest in an attempt to deal with the serious problem of school failure. School engagement builds on the anatomy of the student's involvement in school and describes their feelings, behaviors, and thoughts about their school experiences. So engagement is an important component of student school experience with a close relationship to achievement and school failure. Children who self-set academic goals, attend school regularly and on time, behave well in class, complete their homework, and study at home are likely to interact adequately with the school social and physical environments and perform well in school. In contrast, children who miss school are more likely to display disruptive behaviors in class, miss homework frequently, exhibit violent behaviors on the playground, fail subjects, be retained, and if the behaviors persist, quit school. Moreover, engagement should also be considered as an important school outcome eliciting more or less supportive reactions from educators. For example, children who display school engaged behaviors are likely to receive motivational and instructional support from their teachers. The opposite may also be true. But what makes students engage more or less? The relevant literature indicates that personal variables (e.g., sensory motor, neurodevelopmental, cognitive, motivational, emotional, behavior problems, learning difficulties, addictions) and social and/or cultural variables (e.g., negative family conditions, child abuse, cultural deprivation, ethnic conditions, immigration) or school variables (e.g., coexistence at school, bullying, cyberbullying) may concurrently hinder engagement, preventing the student from acquiring the learnings in the same conditions as the rest of the classmates. **Inclusive Mathematics Education** David Kollosche, Renato Marcone, Michel Knigge, Miriam Godoy Penteadó, Ole Skovsmose, 2019-03-25 The book provides an overview of state-of-the-art research from Brazil and Germany in the field of inclusive mathematics education. Originated from a research cooperation between two countries where inclusive education in mathematics has been a major challenge, this

volume seeks to make recent research findings available to the international community of mathematics teachers and researchers In the book the authors cover a wide variety of special needs that learners of mathematics may have in inclusive settings They present theoretical frameworks and methodological approaches for research and practice School, Family, and Community Partnerships Joyce L.
