ATP and the Heart Joanne S. Ingwall, 2012-12-06 ATP plays a central role in the two leading causes of cardiac morbidity and mortality in the western world ischemia and heart failure We are in our infancy applying what is known about biology and chemistry of ATP toward developing effective therapies for these diseases In this volume the current understanding of the chemistry and biology of ATP specifically in the cardiomyocyte is presented New insights into ATP have been gleaned using biophysical techniques allowing dynamic measurement of chemical events in the intact beating heart and using new animal models in which cardiac proteins are either over expressed deleted or harbor specific mutations This book provides a summary of the basic understanding and includes illustrations of why ATP and the Heart is important to both the clinician and scientist

The Role of Water in ATP Hydrolysis Energy Transduction by Protein Machinery Makoto Suzuki, 2018-05-07 This book introduces recent progress in biological energetics from ATP hydrolysis to molecular machineries The role of water is now recognized to be essential in biological molecular energetics Although energetics is a rather distant field to many biologists any working models for protein machineries such as protein motors transporters and other enzymes must be consistent with their energetics Therefore the book is intended to help scientists build systematic models of biomolecular functions based on three categories 1 ATP hydrolysis reactions including ionic hydration and protonation deprotonation of biomolecules 2 protein ligand protein protein interactions including hydration dehydration processes and 3 functioning mechanisms of protein machineries based on water functions

Energy-Transducing ATPases - Structure and Kinetics Yuji Tonomura, 1986-07-31 Professor Tonomura's book explains at the molecular level how cells use energy harnessed as adenosine triphosphate to perform the fundamental physiological functions such as muscle contraction and the active transport of cations A well written interesting account of the structure and kinetics of energy transducing ATPases

energy transfer processes and therefore constitutes the universal form of directly available energy within cells In this book the authors discuss the chemical properties biosynthesis and functions in cells of ATP Topics include ATP as a sperm movement energizer the hydrolysis reaction of adenosine triphosphate molecules and bio energy transport in the cell the use of exogenous ATP to stimulate the growth of human tissue engineered cartilage ATP in experimental liver surgery the functional role of cerebral ATP levels in body weight regulation ATP as a potential mediator of the aging process and involvement of extracellular ATP and derivatives in trichomonas vaginalis infection *Molecular Structure, Function, and Assembly of the ATP Synthases* Sangkot Marzuki, 2012-12-06 In recent years the ATP synthase H ATPase FoF₁ATPase has been the subject of intensive investigations in many laboratories The major reason for this lies in the fact that this enzyme complex catalyses one of the most important reactions in living cells namely the synthesis of ATP utilizing the energy from an electrochemical transmembrane H gradient generated by the cellular respiratory chain or by the light reactions of photosynthetic organisms The mechanism by which the H motive force is utilized to drive the synthesis of ATP is one of the major unsolved problems in biochemistry Thus the fundamental information concerning the molecular structure and the mechanism of assembly of the ATP synthase is of major significance in cell biology A seminar workshop on the Molecular Structure Function and Assembly of the ATP synthases was held in April 1987 at the East West Center University of Hawaii Honolulu Hawaii to promote exchange of information between laboratories actively engaged in the study of the ATP synthases and to provide a forum for discussion and coordination of data derived from molecular genetic and biochemical approaches used in different laboratories This volume summarizes the result of the seminar workshop in the form of a collection of papers presented at the meeting and provides an overview of current work in this rapidly progressing area of research Bioenergetics Baltazar D. Reynafarje, 2014-10-31 This book is designed to provide new trends of thought concerning the transformation of free energy that occur in living cells and between living cells and their environment

Kinetic Study of the Non-enzymatic Hydrolysis of ATP/ADP in Extreme Geological Environments Christoph Moeller, 2025* Extremophiles microorganisms that thrive in some of Earth's most hostile environments such as hydrothermal vents on the ocean floor These organisms have developed a range of remarkable adaptations that enable them to survive in conditions of extreme temperature reaching 122 °C and pressure reaching 125 MPa A critical factor for their survival is the stability of adenosine triphosphate ATP an essential energy carrier whose hydrolysis could limit metabolic processes under extreme conditions This study aims to enhance our understanding of ATP hydrolysis by using advanced experimental techniques to simulate high pressure and high temperature environments In situ Raman spectroscopy combined with a hydrothermal diamond anvil cell HDAC and a gas pressurized autoclave was employed to investigate the hydrolysis of ATP in aqueous solutions at temperatures of 80 °C 100 °C and 120 °C and pressures up to 1670 MPa The findings indicated that ATP undergoes rapid hydrolysis at elevated temperatures with rate constants of 4.34 s⁻¹ Life's Energy Stefan Bröer, 2022-11-20 What

energises humans to move and think Whether we wake up groggy and say that we have no energy to do anything or whether we wake up refreshed and feel ready to tackle the day scientists and non scientists alike acknowledge that energy is essential for anything to happen However not everyone knows and digs deeper into what energy actually is In the human body energy can be followed by looking at one molecule In Life s Energy the reader is guided through our bodies molecular world to understand of how a single molecule Adenosine Triphosphate ATP can drive life The book goes back in history to see how ATP was discovered Then it follows ATP around the body and explains what it does how it is maintained and explores its role in diseases such as diabetes and cancer Along the way it introduces the scientists involved in ATP research how their research activity was affected by the rise of the Third Reich and why many of them were awarded Nobel Prizes for their insights

Cellular Energetics Frank Diederichs,2019-11-18 This monograph describes metabolic and transport reactions of muscle cells using the laws of chemical thermodynamics In particular the thermodynamics of irreversible processes are used to formulate coupled reactions and their outcome on steady state cycling The effects of ATP cycling on energy metabolism and heat production is described The results of mathematical simulations of metabolism are used to underline theoretical approaches

An Outline of Energy Metabolism in Man Gordon L. Atkins,2013-10-22 An Outline of Energy Metabolism in Man provides an overview of the whole energy metabolic process among humans The book is comprised of seven chapters that are organized according to the lecture series conducted by the author The text first covers the basic principles of metabolism and then proceeds to covering catabolism and resynthesis of simple units Next the book tackles the storage forms and control mechanisms The remaining chapters detail the integration of pathways within cells and the metabolism of the body as a whole The text will be of great use to students of biochemistry and other related fields such as nutrition and nursing

Glimpse into an ATP synthase's F0 motor at work Alexander Wiedenmann,2009 The majority of ATP the carrier of energy in the living world is generated by the ATP synthase The enzyme complex converts energy from the transmembrane electrochemical gradient into rotation by an H or Na current through the F0 part The rotation is transmitted to the F1 part where ATP is formed from ADP and Pi The present thesis aimed to

elucidate the requirements for torque generation during ATP synthesis in the holoenzyme as well as in the isolated F₀ part. To achieve this a quantitative H⁺ transport assay was established. Furthermore the Na⁺ dependent enzyme from *P. modestum* and the H⁺ dependent ATP synthase from *E. coli* were compared with respect to torque generation and ATP synthesis. We observed that a small ion concentration gradient was indispensable for ATP synthesis in both enzymes. Much more surprising was the observation that 100 times higher Na⁺ or H⁺ concentrations were required for synthesis than hydrolysis of ATP. For the first time the ion concentration at the periplasmic side was recognized as critical determinant for ATP synthesis. Based on these data a model of the F-type ATPases is presented.
