Accepted Student For 2015 At Tut:

Developing a Cybersecurity Immune System for Industry 4.0 Sergei Petrenko, 2022-09-01 Cyber immune systems try to mimic the adaptive immune system of humans and animals because of its capability to detect and fend off new unseen pathogens. Today's current cyber security systems provide an effective defense mechanism against known cyber attacks but are not so good when it comes to defending against unknown attacks. This book describes the possible development and organization of self-healing computing based on cyber immunity techniques and aimed at working in the new realm of Industry 4.0. Industry 4.0 is the trend towards automation and data exchange in manufacturing technologies and processes which include cyber physical systems CPS, the internet of things IoT, industrial internet of things IIOT, cloud computing, cognitive computing and artificial intelligence. The book describes the author's research and development of cyber immunity systems that will prevent the destruction of critical information infrastructure by future unknown cyber attacks and thus avoid the significant or catastrophic consequences of such attacks. The book is designed for undergraduate and post graduate students for engineers in related fields as well as managers of corporate and state structures, chief information officers CIO, chief information security officers CISO, architects and research engineers in the field of cybersecurity. This book contains four chapters: 1. Cyber Immunity Concept of the Industry 4.0, 2. Mathematical Framework for Immune Protection of Industry 4.0, 3. Trends and prospects of the development of Immune Protection of Industry 4.0, 4. From detecting cyber attacks to self-healing Industry 4.0.
