

Grasshopper Dissection

Procedure:

Part A—External Structure

1. Place the grasshopper in the dissecting pan. Locate the head, thorax, and abdomen. (See Figure 1.) Use your hand lens to observe the grasshopper carefully. As you observe, record your data in Observations.
2. Observe the parts of the head. The grasshopper has two compound eyes and three simple eyes. The sensory parts located on the head are antennae.
3. Identify the mouth parts. (Refer to Figure 2.) With your forceps, remove the parts. The labrum is the hinged upper lip that is used to hold food. The mandibles are crushing jaws. The maxillae are used to chew and taste food. The labium is the broad, flat lower lip used to hold food while it is being chewed.
4. Locate the eardrums or tympana, small drum-shaped structures on either side of the thorax.
5. All insects have six legs. In the grasshopper, the front pair is used for walking, climbing, and holding food. The middle legs are used for walking and climbing. The hind legs are large and enable the grasshopper to jump.
6. Locate the two pairs of wings.
7. Use the hand lens to look at the tiny openings along the abdomen. These are breathing pores called spiracles through which oxygen enters and carbon dioxide leaves.
8. A female grasshopper has a much longer abdomen than a male. It ends in a four-pointed tip, called an ovipositor, through which eggs are laid.

Materials:

Dissection pan
Grasshopper (preserved)
dissection kit
dissecting pins
magnifying lens
