**Lunar and Interplanetary Trajectories** Robin Biesbroek, 2015-12-23 This book provides readers with a clear description of the types of lunar and interplanetary trajectories and how they influence satellite system design. The description follows an engineering rather than a mathematical approach and includes many examples of lunar trajectories based on real missions. It helps readers gain an understanding of the driving subsystems of interplanetary and lunar satellites. The tables and graphs showing features of trajectories make the book easy to understand.

**Space Flight Dynamics** Craig A. Kluever, 2018-05-29 Thorough coverage of space flight topics with self-contained chapters serving a variety of courses in orbital mechanics, spacecraft dynamics, and astronautics. This concise yet comprehensive book on space flight dynamics addresses all phases of a space mission: getting to space, launch, trajectories, satellite motion in space, orbital motion, orbit transfers, attitude dynamics, and returning from space, entry, flight mechanics. It focuses on orbital mechanics with emphasis on two-body motion, orbit determination, and orbital maneuvers with applications in Earth-centered missions and interplanetary missions. Space Flight Dynamics presents wide-ranging information on a host of topics not always covered in competing books. It discusses relative motion, entry, flight mechanics, low-thrust transfers, rocket propulsion fundamentals, attitude dynamics, and attitude control. The book is filled with illustrated concepts and real-world examples drawn from the space industry. Additionally, the book includes a computational toolbox composed of MATLAB M-files for performing space mission analysis. Key features: Provides practical real-world examples illustrating key concepts throughout the book. Accompanied by a website containing MATLAB M-files for conducting space mission analysis. Presents numerous space flight topics absent in competing titles. Space Flight Dynamics is a welcome addition to the field, ideally suited for upper-level undergraduate and graduate students studying aerospace engineering.

**The Development of Propulsion Technology for U.S. Space-Launch Vehicles, 1926-1991** J. D. Hunley, 2013-03-15 In this definitive study, J. D. Hunley traces the program's development from Goddard's early rockets and the German V-2 missile through the Titan IVA and the Space Shuttle, with a focus on space launch vehicles. Since these rockets often evolved from early missiles, he pays considerable attention to missile technology not as an end in itself but as a contributor to launch vehicle technology. Focusing especially on the engineering culture of the program, Hunley communicates this very human side of technological development by means of anecdotes, character sketches, and case studies of problems faced by rocket engineers. He shows how such a highly adaptive approach enabled the evolution of a hugely complicated technology that was impressive but decidedly not rocket science. Unique in its single-volume coverage of the evolution of launch vehicle technology from 1926 to 1991, this meticulously researched work will inform scholars and engineers interested in the history of technology and innovation as well as those specializing in the history of space flight.

**Low Earth Orbit Satellite Design** George Sebestyen, Steve Fujikawa, Nicholas Galassi, Alex Chuchra, 2018-02-06 In recent decades, the number of satellites being built and launched into Earth's orbit has

grown immensely alongside the field of space engineering itself This book offers an in depth guide to engineers and professionals seeking to understand the technologies behind Low Earth Orbit satellites With access to special spreadsheets that provide the key equations and relationships needed for mastering spacecraft design this book gives the growing crop of space engineers and professionals the tools and resources they need to prepare their own LEO satellite designs which is especially useful for designers of small satellites such as those launched by universities Each chapter breaks down the various mathematics and principles underlying current spacecraft software and hardware designs

Hunley, 2008 For nearly fifty years a wide range of missiles and rockets has propelled U S satellites and spacecraft into the sky J D Hunley s two volume work traces the evolution of this technology from Robert Goddard s research in the 1920s through the development of the Titan missiles and launch vehicles in the 1960s to the refinement of the space shuttle in the 1980s With the first book devoted primarily to military hardware and the second to launch vehicle hardware Hunley offers a sweeping overview of these impressive engineering innovations as well as insights into the dynamic personalities responsible for them Together the two volumes offer a unique invaluable history of rocketry that should appeal to a wide range of scholars and space buffs
