

Apparent Diameter of the Sun

Introduction:

Hold your fist out at arm's length in front of you. How big does your fist appear? Does its apparent size increase, decrease, or stay the same as you pull your fist in closer to you? The apparent size or diameter of an object in the sky, like your outstretched fist, depends on your distance from them. Apparent diameters are measured in degrees. For example, the width of your fist viewed at arm's length has an apparent diameter of about 10° . The apparent diameter of the sun, while in reality a much larger object than your fist, is less than 1° .

As Earth revolves in its elliptical orbit, its distance from the sun, and consequently the sun's apparent diameter, varies. Is distance from the sun a cause of seasons? Is summer warmer because we are closer to the sun and winter colder because we are farther away? In this activity, you will use data on the apparent size of the sun to determine whether distance from the sun can be a cause of seasons.

Lab Skills and Objectives

- To construct a graph of solar apparent diameter data
- To interpret the graph in terms of Earth's distance from the sun
- To compare the graph with Earth's seasonal changes

Procedure

1. Review Data Table 1 to the left on this page. The data given is the apparent diameter of the sun as it appears from Earth. Since the apparent diameter of the sun is less than 1° it is measured in minutes ($'$) and seconds ($''$). There are 60 minutes in a degree and 60 seconds in a minute.

CAUTION: Never look directly at the sun. The data for this activity was collected using indirect measurements.

2. Using the data in the table, plot the apparent diameter of the sun for each of the dates listed on the graph on the back. Draw a smooth curve through the plotted points.

3. Answer the Analysis and Conclusions on the next page.
