A. Duchenne muscular dystrophy is a deadly disorder in which the muscles grow progressively weaker. The disease is caused by a recessive gene on the X chromosome. The pedigree chart below illustrates the inheritance of this gene. Use the chart to answer the questions that follow.

1. Is Duchenne muscular dystrophy more likely to occur in males or in females? Explain your answer.

Males because they only have 1 X chromosome that needs the recessive allele

2. Individual H is a female with this disorder. Explain how she inherited this disease.

Her father gave her his X chromosome with the recessive allele. Her mom was a carrier.

3. Individual K has this disorder, yet his father did not. Explain how this is genetically possible.

Individual K got his X chromosome from his mom, not his dad.

4. Individual G does not have the disease, yet his mother was a carrier and his father had the disease. Explain how this is possible.

Individual G got the Y chromosome from his dad and the X without the disease from his mom.
