Stanley M. Walas, 1991 *Modelling with Differential Equations in Chemical Engineering* covers the modelling of rate processes  
of engineering in terms of differential equations While it includes the purely mathematical aspects of the solution of  
differential equations the main emphasis is on the derivation and solution of major equations of engineering and applied  
science Methods of solving differential equations by analytical and numerical means are presented in detail with many solved  
examples and problems for solution by the reader Emphasis is placed on numerical and computer methods of solution A key  
chapter in the book is devoted to the principles of mathematical modelling These principles are applied to the equations in  
important engineering areas The major disciplines covered are thermodynamics diffusion and mass transfer heat transfer  
fluid dynamics chemical reactions and automatic control These topics are of particular value to chemical engineers but also  
are of interest to mechanical civil and environmental engineers as well as applied scientists The material is also suitable for
