### Scientific Inquiry Cycle: Review

Science based on the scientific method for solving problems and investigating theories. When faced with a new problem, such as a new species or a new element, using research to discover or investigate solutions can help a scientist figure out what is causing the problem fully, including its causes and effects, in the form of a flowchart or flow diagram.

Designing, conducting, and interpreting various experiments, such as design, time and space, are the main components of a scientific inquiry. In science, experiments are conducted to help others understand and teach others. For example, an experiment is conducted to find a factor that may affect the look and taste of food, which influences the effectiveness of the product.

After investigating a problem, investigating their results, what conditions affected it, and any conditions that may have been present, and possible mistakes or new ideas. Communication, sharing findings, results, and reflecting on the importance of the information are essential steps. This process helps scientists make better decisions, leading to better understanding, communication, and future contributions.
