### Scientific Inquiry Cycle: Review

Science based on the scientific method for solving problems and investigating theories. When faced with a new problem, such as a new species or a new element, using science to answer or explore solutions can help a scientist figure out what is causing the problem fully, including its causes and effects, in the form of a flowchart or flow diagram.

Designing, conducting, and interpreting various experiments, such as design, time and space, are the main components of a science inquiry. In order to understand an experiment, one must understand the concept of variables. For example, changing a variable for a factor that may affect the cost and pace of a car, which influences the effectiveness of the solution.

After investigating a problem, investigating their results, what variables affected it, and any constraints that may have been placed on the problem, one must then draw a conclusion. Drawing findings, results, and reflecting on the importance of the information presented, this process is known as scientific inquiry. Science highly emphasizes systematic problem-solving and hypothesis testing.
