

Section 1: Describing Motion

Motion occurs when an object changes its position

- You need a reference point to know whether an object has changed its position
 - *Think about a jet flying across a cloudless sky. Without a reference point how would you know the jet is in motion?*
- **Distance** – how far an object has moved
- **Displacement** – the distance and direction of an object's change in position from its starting point.
- **Speed** – the distance an object travels per unit time
 - *Speed is a rate*
 - *Rate – any change divided by time*
- Calculating speed:
 - Equation: $speed = \frac{distance}{time}$, or: $\boxed{20} = \frac{\boxed{200}}{\boxed{10}}$
- Speed is rarely constant
 - *Think about a trip you have taken. Did you make any stops? Did you pass anyone?*
- Average Speed is total distance divided by total time
- Instantaneous speed is the speed at a specific instance
 - *The speedometer in your car indicates instantaneous speed*
