Power Farming ,1924 **Principles of Sustainable Soil Management in Agroecosystems** Rattan Lal,B.A. Stewart,2013-06-10 With the use of high level soil management technology Africa could feed several billion people yet food production has generally stagnated since the 1960s No matter how powerful the seed technology the seedling emerging from it can flourish only in a healthy soil Accordingly crop yields in Africa South Asia and the Caribbean could be doubled or tripled through adoption of technologies based on laws of sustainable soil management Principles of Sustainable Soil Management in Agroecosystems describes the application of these laws to enhance ecosystem services while restoring degraded soils and promoting sustainable use With chapters contributed by world class soil scientists ecologists and social scientists this book outlines critical changes in management of agricultural soils necessary to achieve food security and meet the food demands of the present and projected future population These changes include conversion to no till and conservation agriculture adoption of strategies of integrated nutrient management water harvesting and use of drip sub irrigation complex cropping farming systems such as cover cropping and agroforestry and use of nano enhanced fertilizers

The book is based on the premise that it is not possible to extract more from a soil than what is put into it without degrading its quality. The strategy is to replace what is removed, respond wisely to what is changed, and be proactive to what may happen because of natural and anthropogenic perturbations. The chapters which exemplify these ideas cover a range of topics including organic farming, soil fertility, crop symbiotic soil microbiota, human driven soil degradation, soil degradation and restoration, carbon sink capacity of soils, soil renewal and sustainability, and the marginality principle.
