Multiplicative Invariant Theory Martin Lorenz, 2005-12-08 Multiplicative invariant theory as a research area in its own right within the wider spectrum of invariant theory is of relatively recent vintage The present text offers a coherent account of the basic results achieved thus far Multiplicative invariant theory is intimately tied to integral representations of finite groups Therefore the field has a predominantly discrete algebraic flavor Geometry specifically the theory of algebraic groups enters through Weyl groups and their root lattices as well as via character lattices of algebraic tori Throughout the text numerous explicit examples of multiplicative invariant algebras and fields are presented including the complete list of all multiplicative invariant algebras for lattices of rank 2 The book is intended for graduate and postgraduate students as well as researchers in integral representation theory commutative algebra and mostly invariant theory

Tilings of the Plane Ehrhard Behrends, 2022-11-12 The aim of the book is to study symmetries and tessellation which have long interested artists and mathematicians Famous examples are the works created by the Arabs in the Alhambra and the paintings of the Dutch painter Maurits Escher Mathematicians did not take up the subject intensively until the 19th century In the process the visualisation of mathematical relationships leads to very appealing images Three approaches are described in this book In Part I it is shown that there are 17 principally different possibilities of tessellation of the plane the so called plane crystal groups Complementary to this ideas of Harald Heesch are described who showed how these theoretical results can be put into practice He gave a catalogue of 28 procedures that one can use creatively oneself following in the footsteps of Escher so to speak to create artistically sophisticated tessellation In the corresponding investigations for the complex plane in Part II movements are replaced by bijective holomorphic mappings This leads into the theory of groups of Möbius transformations Kleinian groups Schottky groups etc There are also interesting connections to hyperbolic geometry Finally in Part III a third aspect of the subject is treated the Penrose tessellation This concerns results from the seventies when easily describable and provably non periodic parquetisations of the plane were given for the first time Journal of the Chemical Society Chemical Society (Great Britain), 1893 Titles of chemical papers in British and foreign journals included in Quarterly journal v 1 12

Soviet Physics, Crystallography, 1992 *Hopf Algebras and Root Systems* István Heckenberger, Hans-Jürgen Schneider, 2020-06-19 This book is an introduction to Hopf algebras in braided monoidal categories with applications to Hopf algebras in the usual sense The main goal of the book is to present from scratch and with complete proofs the theory of Nichols algebras or quantum symmetric algebras and the surprising relationship between Nichols algebras and generalized root systems In general Nichols algebras are not classified by Cartan graphs and their root systems However extending partial results in the literature the authors were able to associate a Cartan graph to a large class of Nichols algebras This allows them to determine the structure of right coideal subalgebras of Nichols systems which generalize Nichols algebras As applications of these results the book contains a classification of right coideal subalgebras of quantum groups and of the

small quantum groups and a proof of the existence of PBW bases that does not involve case by case considerations The authors also include short chapter summaries at the beginning of each chapter and historical notes at the end of each chapter The theory of Cartan graphs Weyl groupoids and generalized root systems appears here for the first time in a book form Hence the book serves as an introduction to the modern classification theory of pointed Hopf algebras for advanced graduate students and researchers working in categorical aspects and classification theory of Hopf algebras and their generalization
