## Adjectives To Describe Mother:

**The Mental Representation of Trait and Autobiographical Knowledge About the Self** Thomas K. Srull, Robert S. Wyer, Jr., 2015-12-03 If there is one topic on which we all are experts it is ourselves Psychologists depend upon this expertise as asking people questions about themselves is an important means by which they gather the data that provide much of the evidence for psychological theory Personal recollections play an important role in clinical theorizing people's thoughts feelings and beliefs provide the principal data for attitudinal research and judgments of one's traits and descriptions of one's goals and motivations are essential for the study of personality Yet despite their long dependence on self report data psychologists know very little about this basic resource and the processes that govern it In spite of the importance of the self as a concept in psychology virtually no empirically tested representational models of self knowledge can be found Recently however several theoretical accounts of the representation of self knowledge have been proposed These models have been concerned primarily with the factors underlying a particular type of self knowledge our trait conceptions of ourselves The models all share the starting assumption that the source of our knowledge of the traits that describe us is memory for our past behavior The lead article in this volume reviews the available models of the processes underlying trait self descriptiveness judgments Although these models appear quite different in their basic representational assumptions exemplar and abstraction models sometimes are difficult to distinguish experimentally Presenting a series of studies using several new techniques which the authors believe are effective for assessing whether people recruit specific exemplars or abstract trait summaries when making trait judgments about themselves they conclude that specific behavioral exemplars play a far smaller role in the representation of trait knowledge than previously has been assumed Finally the limitations of social cognition paradigms as methods for studying the representation of long term social knowledge are discussed and the implications of the research for both existing and future social psychological research are explored Journeys from Childhood to Midlife Emmy E. Werner, Ruth S. Smith, 2001 Presents the development of resilience and coping systems in the underprivileged children of Kauai Culture and Neural Frames of Cognition and Communication Shihui Han, Ernst Pöppel, 2011-01-06 Cultural neuroscience combines brain imaging techniques such as functional magnetic resonance imaging and event related brain potentials with methods of social and cultural psychology to investigate whether and how cultures influence the neural mechanisms of perception attention emotion social cognition and other human cognitive processes The findings of cultural neuroscience studies improve our understanding of the relation between human brain function and sociocultural contexts and help to reframe the big question of nature versus nurture This book is organized so that two chapters provide general views of the relation between biological evolution cultural evolution and recent cultural neuroscience studies while other chapters focus on several aspects of human cognition that have been shown to be strongly influenced by sociocultural factors such as self concept representation language processes emotion time perception and

decision making The main goal of this work is to address how thinking actually takes place and how the underlying neural mechanisms are affected by culture and identity *Overcoming the Odds* Emmy E. Werner,Ruth S. Smith,2019-06-30 Overcoming the Odds looks closely at the lives of an ethnically diverse group of 505 men and women who were born in 1955 on the Hawaiian island of Kauai and who have been monitored from the prenatal period through early adulthood by psychologists pediatricians public health professionals and social workers Werner and Smith trace the impact of a variety of biological and psycho social risk factors and stressful events on the development of these individuals most of whose parents did not graduate from high school and worked as semiskilled or unskilled laborers Incorporating vivid case study accounts with statistical analysis the authors focus on both the vulnerability and the resilience of those who overcame great odds to grow into competent and caring adults They trace the recovery process through which most of the troubled adolescents in the cohort those with histories of delinquency teenage pregnancy and mental health problems emerged with improved prospects in their twenties and early thirties Identifying both the self righting tendencies that enable high risk children later to adapt successfully to work marriage and parenthood and the conditions under which professional and volunteer care is most beneficial Werner and Smith offer concrete suggestions for effective intervention policies
