## Chapter 1: Cloud Computing

### 1. What do you understand by the term cloud computing?

**Answer:** If you know earlier big companies used to maintain their servers which were providing the data storage and computing resources which were very costly to maintain, moreover not necessarily each company was utilizing their servers to fullest or if they wanted to expand the computing power it was not an easy task.

Cloud computing is like the on-demand availability of computer system resources, data storage, and computing power without being managed by the user utilizing them. And it's effortless to increase or decrease the resources you want for yourself. Example AWS.

### 2. Are virtualization and cloud computing the same thing?

**Answer:** No, they are not the same thing; in exact words, virtualization is the technology while cloud computing is a methodology.

To generate multiple simulated environments from a single piece of the underlying hardware.

Cloud computing is a set of approaches to deliver data storage, computation power, infrastructure, etc., to users on-demand across any network.

### 3. What is PaaS? Is Salesforce a PaaS or SaaS?

**Answer:** Platform as a service (PaaS) is a category of cloud computing services that allow customers to develop, run applications without the complexity of building and maintaining the infrastructure typically associated with developing and launching the application(s);

Salesforce is both PaaS and SaaS, and it is SaaS as Salesforce provides you with a set of software offered in an on-demand model.
