

## INTRODUCTION

PageMaker was one of the first desktop publishing programs, introduced in 1985 by Aldus, initially for the Apple Macintosh and, in 1987, for PCs running Windows 1.0. As an application relying on a graphical user interface, PageMaker helped to popularize the Macintosh platform and the Windows environment. PageMaker 7.0, released 9 July 2001.

PageMaker is primarily used for designing and producing publication that requires a combination of text and graphics. PageMaker 6.5 has a rich array of facilities to import text and artwork from other computer application packages, as well as allowing you to generate these directly from within PageMaker itself. PageMaker can handle text better than Illustrator and PhotoShop and also give you the flexibility of graphic control not available in word processors.

2. Expanded support for placing native Illustrator files.
3. Updated EPS filter.
