**Teaching Mathematics Conceptually** Beth L. MacDonald, Jonathan N. Thomas, 2023-04-08 This book expands upon the guiding principles at the heart of Math Recovery instruction exploring their connections with learning theory practical application in the classroom and their wider links to agreed concepts of high quality mathematics teaching. It provides a well rounded overview of all major aspects of mathematics teaching including inquiry based and constructivist approaches planning and assessment and strategies that offer children opportunities for reflection satisfaction and increasing challenge. Particular focus is placed on equitable and inclusive practices in mathematics and how we can develop teaching that connects with the abilities cultures and lived experiences of all children. This is essential reading for all teachers familiar with the Math Recovery approach and classroom mathematics teachers in elementary and primary schools everywhere seeking to enhance their own professional knowledge and understanding. Beth L. MacDonald is an associate professor in Early Childhood Mathematics Education in the School of Teaching and Learning at Illinois State University. Jonathan N. Thomas is an associate professor of mathematics education and the chairperson of the Department of STEM Education at the University of Kentucky.

*A Guide to Detracking Math Courses* Angela Torres, Ho Nguyen, Elizabeth Hull Barnes, Laura Wentworth, 2023-05-03

Create a pathway to equity by detracking mathematics. The tracked mathematics system has been operating in US schools for decades. However research demonstrates negative effects on subgroups of students by keeping them in a single math track thereby denying them access to rigorous coursework needed for college and career readiness. The journey to change this involves confronting some long standing beliefs and structures in education. When supported with the right structures instructional shifts, coalition building and educator training and support the detracking of mathematics courses can be a primary pathway to equity. The ultimate goal is to increase more students access to and achievement in higher levels of mathematics learning especially for students who are historically marginalized. Based on the stories and lessons learned from the San Francisco Unified School District educators who have talked the talk and walked the walk this book provides a model for all those involved in taking on detracking efforts from policymakers and school administrators to math coaches and teachers. By sharing stories of real world examples, lessons learned and prompts to provoke discussion about your own context the book walks you through Designing and gaining support for a policy of detracked math courses. Implementing the policy through practical shifts in scheduling, curriculum, professional development and coaching. Supporting and improving the policy through continuous research, monitoring and maintenance. This book offers the big ideas that help you in your own unique journey to advance equity in your school or district's mathematics education and also provides practical information to help students in a detracked system thrive.

**Improving Working Memory in Learning and Intellectual Disabilities** Silvia Lanfranchi,Barbara Carretti,2016-08-05 The last forty years of research have demonstrated that working memory WM is a key concept for understanding higher order cognition To give an example WM is involved in reading comprehension problem solving and reasoning but also in a number of everyday life activities It has a clear role in the case of atypical development too For instance numerous studies have shown an impairment in WM in individuals with learning disabilities LD or intellectual disabilities ID and several researchers have hypothesized that this can be linked to their difficulties in learning cognition and everyday life The latest challenge in the field concerns the trainability of WM If it is a construct central to our

understanding of cognition in typical and atypical development then specific intervention to sustain WM performance might also promote changes in cognitive processes associated with WM The idea that WM can be modified is debated however partly because of the theoretical implications of this view and partly due to the generally contradictory results obtained so far In fact most studies converge in demonstrating specific effects of WM training i e improvements in the trained tasks but few transfer effects to allied cognitive processes are generally reported It is worth noting that any maintenance effects when investigated are even more meagre In addition a number of methodological concerns have been raised in relation to the use of 1 single tasks to assess the effects of a training program 2 WM tasks differing from those used in the training to assess the effects of WM training and 3 passive control groups These and other crucial issues have so far prevented any conclusions from being drawn on the efficacy of WM training Bearing in mind that the opportunity to train WM could have a huge impact in the educational and clinical settings it seems fundamentally important to shed more light on the limits and potential of this line of research The aim of the research discussed here is to generate new evidence on the feasibility of training WM in individuals with LD and ID There are several questions that could be raised in this field For a start can WM be trained in this population Are there some aspects of WM that can be trained more easily than others Can a WM training reduce the impact of LD and ID on learning outcomes and on everyday living What kind of training program is best suited to the promotion of such changes *School Library Makerspaces in Action* Heather Moorefield-Lang, 2018-03-05 Maker learning spaces in schools and public libraries are made real through the narratives of professional librarians around the world comprising the collaborative activities experiences and perspectives of librarians as they have implemented makerspaces for students of all ages School Library Makerspaces in Action is for any librarian looking for inspiration for their own makerspaces hackerspaces fablabs or DIY locations and how to use these spaces in libraries and educational settings Contributions from authors around the world address the needs of most all readers including how to provide the staff training necessary for a successful makerspace Each chapter is written from an author's personal experience and with only a little fine tuning and imagination many of these ideas can be used throughout all levels disciplines and subjects in K 12 education and carry over into higher education The successes and optimism shared in this collection will inspire librarians and educators to think positively about how to implement maker learning locations train staff and use makerspaces in their libraries and classrooms to promote and share new ideas **Official Gazette of the United States Patent and Trademark Office** ,2006
