

- 1 The graph shows the variation in length of 86 Atlantic salmon.

- a i What type of variation is shown by the lengths of the salmon in group R?
Give evidence to support your answer.

(1 mark)

- ii Give **two** possible causes of this variation that result from meiosis during gamete formation.

(2 marks)

- b When comparing variation in size between two groups of organisms, it is often considered more useful to compare standard deviations rather than ranges.
Explain why.

(2 marks)

AQA Biology, 2005, Unit 5 (Question 4)

- 2 Brown rats are classed as pests. Warfarin has been used as a rodenticide since the 1950s. Warfarin interferes with the way in which vitamin K is used in blood clotting. Rats which eat warfarin are killed due to internal bleeding.

Warfarin-resistant rats have been identified in various parts of Britain. Resistance to warfarin is determined by a gene with two codominant alleles, W^R and W^S .

Some rats are resistant to warfarin as they have the allele W^R . Rats have three possible genotypes:

1. $W^R W^R$ resistant to warfarin but with a very high requirement for vitamin K
2. $W^R W^S$ resistant to warfarin with slightly increased vitamin K requirement
3. $W^S W^S$ susceptible (not resistant) to warfarin with normal low requirement for vitamin K.

In addition, rats with the genotype $W^R W^R$ require very large amounts of vitamin K in their diets. If they do not receive this they will die within a few days due to internal bleeding.
