## Front Drive Actuator/Differential Lock

**NOTE:** The actuator is not a serviceable component. If it is defective, it must be replaced.

**NOTE:** The actuator will operate only when the ignition switch is in the ON position.

The front drive actuator is located on the side of the front drive input housing. With the engine stopped and the ignition switch in the ON position, a mandatory "whining" sound can be heard each time the drive select switch is shifted or the differential lock is activated. If no sound is heard, see Diagnostics System. If the actuator does constantly or makes operating or grinding sounds, the actuator must be replaced.

### REMOVING

1. Disconnect the connector on the actuator housing.
2. Using a 12.0 mm wrench, remove the mounting cap screws from the differential side of the actuator.

3. Remove the mounting cap screws from below the actuator on the transmission side.

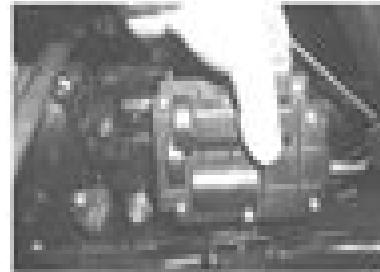

4. Loosen but do not remove the mounting cap screws at the front of the actuator, then slide the actuator to the rear enough to clear the front mounting cap and the actuator shaft.

### INSTALLING

**NOTE:** Make sure to properly align the differential lock actuator housing with the hole in the differential lock housing.

1. Align the O-rings on the actuator, then make sure that all mounting surfaces are clean and free of debris.
2. Align the actuator with the actuator shaft and slide it forward until the shaft locking cap is engaged by the cap screws in the side of the front mounting cap.

3. While holding the actuator firmly forward, tighten the front cap screws to hold the actuator in place. Then install but do not tighten the front mounting cap screws.

4. Loosen the front cap screws, then tighten the cap screws on the differential side.

**NOTE:** It is important to tighten this cap screw while the others are loose to ensure proper seating of the actuator.

5. Replace the mounting cap screws, then connect the electrical plug to the main harness.
6. Turn the ignition switch to the ON position and check the operation by shifting the "drive" wheel position several times.
7. Secure the wiring harness to the frame with a cable tie.

## Front Differential

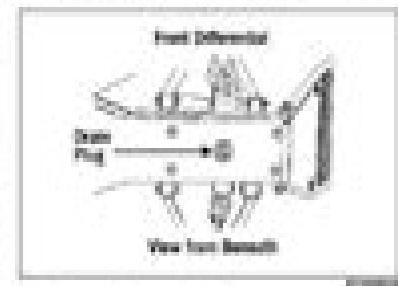

### REMOVING DIFFERENTIAL

1. Secure the AIV on a support stand to elevate the vehicle.

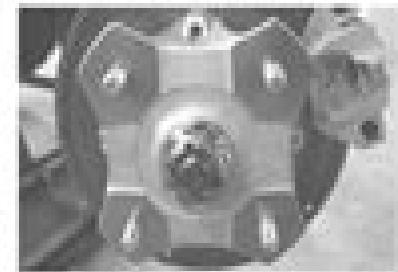

#### **WARNING**

Make sure the AIV is safely supported on the support stand to avoid injury.

2. Remove the drain plug and drain the gear lubricant into a clean pan, then reinstall the plug and tighten to 43 N.m.

3. Remove the front wheel.
4. Pump up the hand brake, then engage the hand brake lock.
5. Remove and discard the outer pin securing the lock nut, then remove the lock nut and housing.

6. Remove the hand brake lock.
7. It is not necessary to remove the hand brake cables from the pulleys for this procedure.
8. Remove the two brake calipers. Attach the tie rod cap screws.
