Wallhagen,Mathias Cehlin,2023-12-20 This book assembles the latest knowledge linked to urban environments and urban socio eco technological systems including urban energy transport material and ecosystems Urban environments and systems affect every person s life in many ways and can have negative impacts on the local and global environment They create value but sometimes with a high environmental cost from a lifecycle perspective Therefore scientists and global leaders call for an urban transition to create more urban environments and systems that are climate positive sustainable and healthy which is necessary for society to function within the planetary boundaries This is a great challenge Huge transformations and new ways of thinking regarding the design and co existence of technical social and ecological systems are necessary to turn the present challenge into opportunities This book Urban Transition Perspectives on Urban Systems and Environments explores this challenge and several different topics related to possible probable or necessary urban transitions in the urban environment It assembles a variety of authors who present many aspects and the latest knowledge linked to urban transitions of the urban environment and urban socio eco technological systems including urban energy transport building material and eco systems Furthermore the importance of urban systems and urban environments is seldom clearly linked to their impact on the environment and humans This book examines this gap the crucial issues relating to how urban systems influence the urban structure and how they can be formed and designed to become more sustainable It explores the link between the complex systems in cities the physicality of the built environment and the living environments for the people The book proposes a rich garden of ideas to provoke and develop current research debate and new forms of practice

**Construction Manual, Volume I: Principles and Practices of Planning, Siting, Designing, Constructing, and Maintaining Buildings in Coastal Areas , Probabilistic Tsunami Hazard and Risk Analysis** Katsuichiro Goda, Raffaele De Risi, Aditya Riadi Gusman, Joan Nistor, 2024-10-31 Probabilistic Tsunami Hazard and Risk Analysis Towards Disaster Risk Reduction and Resilience covers recent calls for advances in quantitative tsunami hazard and risk analyses for the synthesis of broad knowledge basis and solid understanding of interdisciplinary fields spanning seismology tsunami science and coastal engineering. These new approaches are essential for enhanced disaster resilience of society under multiple hazards and changing climate as tsunamis can cause catastrophic loss to coastal cities and communities globally. This is a low probability high consequence event and it is not easy to develop effective disaster risk reduction measures. In particular uncertainties associated with tsunami hazards and risks are large. The knowledge and skills for quantitative probabilistic tsunami hazard and risk assessments are in high demand and are required in various related fields including disaster risk management governments and local communities and the insurance and reinsurance industry catastrophe model. Focuses on fundamentals on probabilistic tsunami hazard and risk analysis. Includes case studies covering a wide range of applications related to tsunami hazard and risk assessments. Covers tsunami disaster risk management Coastal Construction Manual, Vol. 1, Principles and Practices of Planning, Siting, Designing, Constructing, and Maintaining Buildings in Coastal Areas, Edition 3, August 2005 ,2009 **Coastal Construction Manual, Principles and Practices of Planning, Siting, Designing, Constructing, and Maintaining Residential Buildings in Coastal Areas, Volume 1: Instruction Historical Perspective, Etc., June 2000** ,2000
