The Visible Spectrum

The colors of the visible spectrum are determined by wavelength. The color with the longest wavelength is red, and the color with the shortest wavelength is violet.

Wavelength

It travels in waves. Energy that can be seen is light. The number of waves passing a point in a given amount of time is called frequency.

Amplitude: The height of a wave. The highest and lowest parts of a wave are called crests and troughs. A wavelength is the distance between two crests or two troughs.
