[Evaluation of the Effectiveness of the Alabama Math, Science, and Technology Initiative \(AMSTI\)](#). Denis Newman, Pamela Finney, Stephen H. Bell, Herb Turner, Andrew Jaciw, Jenna Zacamy, Laura Gould, 2016 The Alabama State Department of Education ALSDE developed a statewide initiative to improve mathematics and science teaching and student achievement in kindergarten through grade 12 K 12 The Alabama Math Science and Technology Initiative AMSTI is a two year intervention intended to better align classroom practices with national and statewide teaching standards and ultimately to improve student achievement by providing PD access to materials and technology and in school support for teachers AMSTI a schoolwide intervention was introduced in 20 schools in 2002 Each year since then the state has rolled out the program to additional schools within its 11 regions By 2009 about 40% of the state s 1 518 schools were designated as AMSTI schools Funding for the program from the state legislature was 46 million in 2009 Given the policy relevance and level of investment in AMSTI the Regional Educational Laboratory Southeast mounted a longitudinal cluster randomized controlled trial to determine the effectiveness of AMSTI in grades 4 8 as implemented in five regions in the state Previous evaluations of the program s effects on students in K 12 did not use

randomized controlled trials The most recent evaluation Miron Maxwell 2007 reported that students in grade 5 in AMSTI schools outperformed students in non AMSTI schools in math science and reading and students in grade 4 in AMSTI schools outperformed their counterparts in non AMSTI schools in reading only These evaluations used a study design that compared school level test scores of AMSTI schools with non AMSTI schools in the same district but did not establish preintervention comparability This study's RCT design improves on previous evaluations because it eliminates selection bias and establishes the preintervention comparability of the two groups The effect of AMSTI on student achievement in math after one year as measured by end of the year scores on the Stanford Achievement Test Tenth Edition SAT 10 math problem solving assessment of students in grades 4-8 was 2.06 scale score units The difference of 0.05 standard deviation in favor of AMSTI schools is equivalent to a gain of 2 percentile points on the SAT 10 math problem solving assessment for the average control group student had the student received AMSTI The 0.05 standard deviation is statistically significant but smaller than the effect the research team believed would be detectable by the experiment as designed Whether this size effect is educationally important is an open question It may be useful to convert this effect into a more policy relevant metric additional student progress measured in days of instruction In these terms the average estimated effect of AMSTI was equivalent to 28 days of additional student progress over students receiving conventional math instruction The effect of AMSTI on student achievement in science as measured by end of the year scores on the SAT 10 science assessment required only in grades 5 and 7 was not statistically significant after one year AMSTI had a positive and statistically significant effect on classroom practices in math and science after one year Based on multiple surveys in which teachers reported the number of minutes of active learning strategies used during the previous 10 day period AMSTI math teachers averaged 49.83 more minutes and AMSTI science teachers averaged 40.07 more minutes than control teachers These estimated effects are equivalent to 0.47 standard deviation in math and 0.32 standard deviation in science Although teachers in both the AMSTI and control groups reported using active learning instructional strategies teachers in AMSTI schools reported spending more time engaged in this type of instruction The exploratory investigation of the two year effect of AMSTI on student achievement in science also found a statistically significant result with a magnitude of 4.00 scale score units This effect represents a difference of 0.13 standard deviation in favor of AMSTI schools equivalent to a gain of 5 percentile points for the average control group student had the student received AMSTI for two years The effect of AMSTI on teacher reported content knowledge after one year was not statistically significant in either math or science AMSTI did have a positive and statistically significant effect on student engagement after one year measured on a 5 point scale ranging from not engaged to fully engaged AMSTI teachers were more likely than control teachers to rate their students as achieving higher levels of engagement An exploration of the differential effects of AMSTI on student achievement for subgroups of students found no statistically significant differential effects on student achievement in mathematics or science based on racial/ethnic minority status eligibility for free or reduced

price lunch gender or pretest level In reading however AMSTI had a statistically significant differential effect for minority and White students of 3.04 scale score points p

Handbook of Field Experiments Esther Duflo, Abhijit Banerjee, 2017-03-21 Handbook of Field Experiments Volume Two explains how to conduct experimental research presents a catalog of research to date and describes which areas remain to be explored The new volume includes sections on field experiments in education in developing countries how to design social protection programs a section on how to combat poverty and updates on data relating to the impact and determinants of health levels in low income countries Separating itself from circumscribed debates of specialists this volume surpasses the many journal articles and narrowly defined books written by practitioners This ongoing series will be of particular interest to scholars working with experimental methods Users will find results from politics education and more Balances methodological insights with analyses of principal findings and suggestions for further research Appeals broadly to social scientists seeking to develop an expertise in field experiments Written in a language that is accessible to graduate students and non specialist economists *State Education Journal Index*, 2003 An index of state education journals

AMSTI Mathematics in Grades 4 and 5 Judy Bennefield Bright, 2010 Abstract Concerns with the deficiencies of student achievement in mathematics have prompted reform efforts This study investigated one reform effort called the Alabama Math Science and Technology Initiative AMSTI Quantitative data were collected from the results of Stanford Achievement Test Tenth Edition SAT 10 and the Alabama Reading and Mathematics Test ARMT Qualitative data were collected from the participating teachers Fourth and fifth grade students from four rural elementary schools were involved in this study Two schools were classified as AMSTI schools where the teachers had participated in at least one two week session of professional development Two schools were identified as non AMSTI schools The participating teachers from the non AMSTI schools had not received training Quantitative data were collected from the SAT 10 and ARMT for school years 2008 2009 and 2009 2010 The students scores were analyzed using an independent samples t test Results of the study demonstrated that there was no statistically significant difference in the SAT 10 and ARMT mean scores of the students in AMSTI schools and the mean score of the students in the non AMSTI schools Qualitative data involved individual teacher interviews of AMSTI teachers and non AMSTI teachers based on their perceptions of AMSTI The interviews were transcribed and studied to determine emerging themes The dominate themes were AMSTI s impact on teachers its impact on students and time required to implement it The AMSTI teachers had varied opinions of the impact AMSTI had on them and their students however all the teachers agreed that AMSTI was challenging to implement They liked many of the AMSTI strategies but found it difficult and time consuming to implement AMSTI and meet the mandated requirements that were already in place in the classroom Additionally the teachers commented that AMSTI had positively impacted their students with the activities and games Students were also impacted by the hands on work with manipulatives and the group work associated with most AMSTI strategies The non AMSTI teachers had perceptions primarily based on what they had heard and

interpreted from conversations with other teachers Like the AMSTI teachers these teachers also saw pending problems with incorporating AMSTI into the required curriculum
