## Equations and Inequalities

► The belief that humor and laughter can have positive benefits on our lives is not new. From ancient Greek philosophers to modern social media influencers, a lot has been said about the relationship between laughter and our physical and mental well-being.

*"Laughter is bodily exercise, precious to health."*

—Aristotle

*"Laughing is, and always will be, the best form of therapy."*

—Dau Voire

Some random humor factoids:

- The average adult laughs 15 times each day. (Newhouse News Service)
- Forty-six percent of people who are telling a joke laugh more than the people they are telling it to. (U.S. News and World Report)
- Eighty percent of adult laughter does not occur in response to jokes or funny situations. (Independent)
- Algebra can be used to model the influence that humor plays in our responses to negative life events. (Bob Sizer, College Algebra)

That last tidbit that your author threw into the list is true. Based on our sense of humor, there is actually a formula that predicts how we will respond to difficult life events.

Formulas can be used to explain what is happening in the present and to make predictions about what might occur in the future. In this chapter, you will learn to use formulas in new ways that will help you to recognize patterns, logic, and order in a world that can appear chaotic to the untrained eye.

**Here's where you'll find this application:**

A mathematical model that includes sense of humor as a variable is developed in Example 9 of Section 1.2.

Equations, Inequalities and Graphs (IGCSE Math) Lee Jun Cai, Confused about the various concepts on Equations Inequalities and Graphs taught in school or simply want more practice questions This book on Equations Inequalities and Graphs seeks to offer a condensed version of what you need to know for your journey in IGCSE Mathematics alongside with detailed worked examples and extra practice questions Tips on certain question types are provided to aid in smoothing the working process when dealing with them      **Approaches to Algebra** N. Bednarz,C. Kieran,L. Lee,2012-12-06 In Greek geometry there is an arithmetic of magnitudes in which in terms of numbers only integers are involved This theory of measure is limited to exact measure Operations on magnitudes cannot be actually numerically calculated except if those magnitudes are exactly measured by a certain unit The theory of proportions does not have access to such operations It cannot be seen as an arithmetic of ratios Even if Euclidean geometry is done in a highly theoretical context its axioms are essentially semantic This is contrary to Mahoney s second characteristic This cannot be said of the theory of proportions which is less semantic Only synthetic proofs are considered rigorous in Greek geometry Arithmetic reasoning is also synthetic going from the known to the unknown Finally analysis is an approach to geometrical problems that has some algebraic characteristics and involves a method for solving problems that is different from the arithmetical approach 3 GEOMETRIC PROOFS OF ALGEBRAIC RULES Until the second half of the 19th century Euclid s Elements was considered a model of a mathematical theory This may be one reason why geometry was used by algebraists as a tool to demonstrate the accuracy of rules otherwise given as numerical algorithms It may also be that geometry was one way to represent general reasoning without involving specific magnitudes To go a bit deeper into this here are three geometric proofs of algebraic rules the first by Al Khwarizmi the other two by Cardano      **2500 Solved Problems in College Algebra and**
