Integrative Document & Content Management Len Asprey,Michael Middleton,2003-01-01 Portals present unique strategic challenges in the academic environment Their conceptualization and design requires the input of campus constituents who seldom interact and whose interests are often opposite The implementation of a portal requires a coordination of applications and databases controlled by different campus units at a level that may never before have been attempted at the institution Building a portal is as much about constructing intra campus bridges as it is about user interfaces and content Designing Portals Opportunities and Challenges discusses the current status of portals in higher education by providing insight into the role portals play in an institution s business and educational strategy by taking the reader through the processes of conceptualization design and implementation of the portals in different stages of development at major universities and by offering insight from three

producers of portal software systems in use at institutions of higher learning and elsewhere

Wilde's WWW

Erik Wilde, 2012-12-06 What is the difference between a URL and a URI How does HTTP fulfill its task Why do we need XML What is it and will it eventually replace HTML This book gives answers to these questions and a host of others that may be asked by attentive inhabitants of cyberspace The book is of course not just a glossary of abbreviations and frequently used terms It is rather a comprehensive and still succinct presentation of the technology used in the World Wide Web It is surprising to note that even though hundreds of books have been published that discuss the Web there have been none so far to thoroughly explain the inner workings of this popular Internet application which is so simple to use and yet so complex when it comes to really understand what is going on inside The target audience of this book is perhaps best described by how it was first used by the author himself A draft version was chosen as the supporting text for a class of practitioners who attended a continuing education course on WWW technology These were people who knew what the Web is and how it may be used for business but needed to know how the technology works During the planning for this course the author found that no suitable book was on the market and decided to write one himself
