

Cladograms for Tetrapoda

provides hypothesized evolutionary among a group of species based on early and derived characters.

CHART

As a cluster is a group of components, which share certain characteristics, clustered systems are common sense. In other words, in clustered systems there are features of interaction with other components which are not present in single systems. Thus, a single system can have no right to exist on its own. These properties of clusters are the basis for the development of systems with subsystems, small worlds.
