Modelling and numerical simulations with differential equations in mathematical biology, medicine and the environment Appanah Rao Appadu, Ramoshweu Solomon Lebelo, Hagos Hailu Gidey, Bilge Inan, 2023-04-05 Methods of Mathematical Modeling Hemen Dutta, 2025-08-01 Methods of Mathematical Modeling Advances and Applications delves into recent progress in this field highlighting innovative methods and their uses in different domains. This book covers convergence analysis involving nonlinear integral equations and boundary value problems. Navier Stokes equations in Sobolev Gevrey spaces, magneto hydrodynamics of ternary nanofluids with heat transfer effects, vortex nerve complexes in video frame shape approximation, hybrid schemes for computing hyperbolic conservation laws and solutions to new fractional differential equations. Additionally, the book examines dynamics of Leslie Gower type predator-prey models and models for the dynamics of generic crop and water availability. Readers will find diverse approaches, techniques, and applications needed for modeling various physical and natural systems. Each chapter is self-contained, encouraging independent study and application of the modeling examples to individual research projects. This book serves as a valuable resource for researchers, students, educators, scientists, and practitioners involved in different aspects of modeling. Provides new mathematical methods and techniques for modeling various physical and natural systems. Includes new hybrid computational schemes and procedures for handling wave interactions. Includes advanced level convergence analysis and generalized Navier Stokes equations. Provides readers with the dynamics of predator-prey, generic crop and water availability models. System Modeling and Optimization Lorena Bociu, Jean-Antoine Désidéri, Abderrahmane Habbal, 2017-04-10 This book is a collection of thoroughly refereed papers presented at the 27th IFIP TC 7 Conference on System Modeling and Optimization held in Sophia Antipolis, France in June/July 2015. The 48 revised papers were carefully reviewed and selected from numerous submissions. They cover the latest progress in their respective areas and encompass broad aspects of system modeling and optimization such as modeling and analysis of systems governed by Partial Differential Equations (PDEs) or Ordinary Differential Equations (ODEs), control of PDEs/ODEs, nonlinear optimization, stochastic optimization, multi-objective optimization, combinatorial optimization, industrial applications, and numerics of PDEs. **Computational Mathematics and Applications** Dia Zeidan, Seshadev Padhi, Aliaa Burqan, Peer Ueberholz, 2020-11-23 This book is a collection of invited and reviewed chapters on state-of-the-art developments in interdisciplinary mathematics. The book discusses recent developments in the fields of theoretical and applied mathematics, covering areas of interest to mathematicians, scientists, engineers, industrialists, researchers, faculty, and students. Readers will be exposed to topics chosen from a wide range of areas including differential equations, integral reforms, operational calculus, numerical analysis, fluid mechanics, and computer science. The aim of the book is to provide brief and reliably expressed research topics that will enable those new or not aware of mathematical sciences in this part of the world. While the book has not been precisely planned to address any branch of mathematics, it presents contributions of the

relevant topics to do so The topics chosen for the book are those that we have found of significant interest to many researchers in the world These also are topics that are applicable in many fields of computational and applied mathematics This book constitutes the first attempt in Jordanian literature to scientifically consider the extensive need of research development at the national and international levels with which mathematics deals The book grew not only from the international collaboration between the authors but rather from the long need for a research based book from different parts of the world for researchers and professionals working in computational and applied mathematics This is the modified version of the back cover content on the print book **Recent Developments in Fractional Calculus: Theory, Applications, and Numerical Simulations** Lakhveer Kaur,Pushpendra Kumar,2025-05-30 This book discusses recent developments in fractional calculus and fractional differential equations in a very elaborative manner and is of interest to research scholars academicians and scientists who want to enhance the knowledge in the context of new insights and mathematical ideas in fractional calculus and its emerging applications in various fields It focuses on strengthening the existing results along with identifying the practical challenges encountered The purpose of this collection is to provide comprehension of articles that reflect recent mathematical results as well as some results in applied sciences untouched by the tools and techniques of fractional calculus along with their modelling and computation having applications in diverse arenas

Physics Equations Gangwei Wang,Xiangpeng Xin ,Samir A. El-Tantawy,2024-08-13 Nonlinear problems originating from applied science that is closely related to practices contain rich and extensive content It makes the corresponding nonlinear models also complex and diverse Due to the intricacy and contingency of nonlinear problems unified mathematical methods still remain far and few between In this regard the comprehensive use of symmetric methods along with other mathematical methods becomes an effective option to solve nonlinear problems *Hybrid Solutions for the Modelling of Complex Environmental Systems* Christian E. Vincenot,Stefano Mazzoleni,Lael Parrott,2017-01-11 Systems studied in environmental science due to their structure and the heterogeneity of the entities composing them often exhibit complex dynamics that can only be captured by hybrid modeling approaches While several concurrent definitions of hybrid modeling can be found in the literature it is defined here broadly as the approach consisting in coupling existing modelling paradigms to achieve a more accurate or efficient representation of systems The need for hybrid models generally arises from the necessity to overcome the limitation of a single modeling technique in terms of structural flexibility capabilities or computational efficiency This book brings together experts in the field of hybrid modelling to demonstrate how this approach can address the challenge of representing the complexity of natural systems Chapters cover applied examples as well as modeling methodology

Fractional Derivatives with Mittag-Leffler Kernel José Francisco Gómez,Lizeth Torres,Ricardo Fabricio Escobar,2019-02-13 This book offers a timely overview of fractional calculus applications with a special emphasis on fractional derivatives with Mittag Leffler kernel The different contributions written by applied mathematicians physicists and engineers offers a snapshot of recent research in the field highlighting the current methodological frameworks together with applications in different fields of science and engineering such as chemistry mechanics epidemiology and more It is intended as a timely guide and source of inspiration for graduate students and researchers in the above mentioned areas
