D. Comar,2013 There is a gap between the extensive mathematics background that is beneficial to biologists and the minimal
mathematics background biology students acquire in their courses The result is an undergraduate education in biology with
very little quantitative content New mathematics courses must be devised with the needs of biology students in mind In this
volume authors from a variety of institutions address some of the problems involved in reforming mathematics curricula for
biology students The problems are sorted into three themes Models Processes and Directions It is difficult for
mathematicians to generate curriculum ideas for the training of biologists so a number of the curriculum models that have
been introduced at various institutions comprise the Models section Processes deals with taking that great course and
making sure it is institutionalized in both the biology department as a requirement and in the mathematics department as a
course that will live on even if the creator of the course is no longer on the faculty Directions looks to the future with each
paper laying out a case for pedagogical developments that the authors would like to see Teaching and Learning
